The promise. The delivery.

One operating standard across classroom, home and platform.

> Responsibilities, acceptance and evidence before expansion.

LEARN / MOVE / EXPLORE / BELONG

Current controls: 13 October 2026 (model pilot-38-v5.2). The complete original reference material follows the current controls; it carries no pilot financial figures. The 234-line pilot register and the 12-month pilot cash schedule govern every number.

Current Operations, Platform & Partner Companion

Status: Current working operations master | **Prepared:** 13 October 2026 (model pilot-38-v5.2) **Scope:** one pilot location, children ages 2–5, bilingual family-learning program, adult-mediated digital platform, and staged partner expansion.

> *This is an operating design and acceptance plan. It does not claim that every service is hosted, approved, accredited, staffed, or production-tested today.*

1. Operating promise

Futures Friends gives a daycare, church program, home daycare, or family a coherent way to connect short stories with classroom practice, movement, food language, family take-home work, and child development observation. The operating loop is **Watch, Talk, Do, Play, Reinforce, Take Home**.

The first operating case is one pilot location serving ages 2–5. Expansion to additional centers, churches, and family settings is staged only after the pilot demonstrates safe delivery, repeatable onboarding, usable data controls, family engagement, and a support cost the business can carry.

2. Daily implementation

A center adapts the day to its license, staffing, ratios, meals, naps, weather, accessibility needs, and local rules. Futures Friends supplies a program layer, not a replacement for licensing or supervision.

Block	Staff action	Child route	Record
Arrival	Greet, visual choice, transition support	Choose, observe, communicate	Support note if needed
Connection	Preview schedule and weekly idea	Point, sign, speak, move, listen	Access/interest note
Short story	Show accepted media or use live retelling	Watch, predict, imitate, opt out	Version used
Talk/do	Offer object or picture; wait	Build, sort, compare, tell, show	Factual observation
Movement	Offer active and adaptive versions	Move, direct, reach, drum, rest	Adaptation note if needed
Meal	Serve safely; honor refusal	Choose, name, pass, taste or observe	Menu, allergy, temperature records
Zones	Open connected materials	Repeat idea through play	Material/incident records
Closing	Revisit change and choose take-home cue	Show, tell, point, mark	Family cue

Two-year-olds may use objects, puppets, cards, songs, and live retelling without being put on the older-child video rhythm. Screens are short invitations used with an adult, never unsupervised childcare.

3. Role-based platform requirements

The digital platform becomes high-value when each user sees only the work and records needed for that role. It must enforce permissions on the server and database, not only hide buttons in the browser.

Student/Kid Mode

An adult links the child profile. The child sees assigned curriculum work, approved media, activities, and finite character messages. The exit gate returns to an adult-controlled flow. The system records completion and progress without turning a preschool child into a public profile. No open-ended child AI is part of the approved scope.

Parent/family portal

The family sees consent status, child linkage, assignments, weekly digest, messages, progress, home activities, bilingual settings, and support contact. The parent can review or request correction, export, or deletion according to the privacy policy and applicable law.

Teacher portal

Teachers see their assigned roster, current lesson sequence, observation notes, activity prompts, meal/movement connections, and family communication tools. They cannot see director-only financial records or another tenant’s data.

Director portal

Directors manage enrollment, staff invites, schedules, curriculum assignments, reports, billing view, and center settings. Director actions need an audit trail and least-privilege defaults.

Support/HQ and partner portals

Support sees the minimum needed to resolve a ticket. HQ analytics are aggregate unless a documented support need requires tenant-level access. Future church/daycare partners receive their own tenant, kit catalog, onboarding, training, support, and renewal view.

4. Data, privacy, security, and resilience

The platform handles child, family, staff, consent, attendance/progress, photos or media, messages, billing, and support records. Launch readiness requires:

- tenant isolation tested with two fake centers and role accounts;
- database row-level security verified for every table;
- server-enforced Kid Mode and family linkage;
- secure invite, reset, session expiry, rate limits, and audit logs;
- private file storage and expiring access for sensitive media;
- secret management with no service keys in public code;
- retention, deletion, export, consent, and incident response procedures;
- encrypted backups, restore test, recovery owner, and recovery-time target;
- staging data only for security testing;
- accessibility, responsive, iPad/Safari, performance, and network testing;
- independent web/API/cloud security assessment before serious partner claims.

A local preview, passing agent test, or GitHub Pages deployment does not prove a hosted, persistent, secure school platform. The release record must identify what was tested, on which environment, with what data, and who accepted it.

5. Curriculum and educator operations

The current library describes 12 units, 48 theme weeks, 27 family activities, 17 printables, and 37 internal training modules. These are inventory counts. Units, Spanish materials, training modules, and printables remain draft or review status until an educator owner accepts them.

Every week has one story idea, one concrete activity, one movement route, one food or sensory connection where appropriate, one family cue, and an observation prompt. The adult records what the child did and what support helped. No child is ranked.

Educator onboarding uses orientation, classroom foundation, lead practice, director operations, kitchen practice, and internal coach/trainer stages. Completion means the adult can perform the routine safely and explain the boundary between program guidance and local licensing, health, food, and emergency requirements. Futures Friends training is not called state-approved credit or certification without documented approval.

6. Meals and movement controls

The Eat the Rainbow framework includes color language, family-style participation, recipes, menus, shopping and prep guidance, and child-safe jobs. A qualified food lead must approve ingredients, allergen controls, texture, choking preparation, substitutions, temperatures, portions, and applicable meal-program crediting before service. A nurse or health reviewer can review the framework; that review is not medical clearance or accreditation.

Movement includes Turtle Tempo, Sun Stretch, Heart Hands, transitions, outdoor play, carrying, rhythm, and adaptive options. Staff offer seated, visual, AAC, mobility-device, and low-stimulation routes. They do not force contact, stretching, breathing, balance, or taste.

7. Tablet and merchandise operations

The pilot models 8 school-owned classroom tablets with a 10-device management minimum; a family tablet program is a Phase 2 planning assumption. A candidate device would be locked to Kid Mode, remotely managed, paired by adult QR flow, branded with approved characters, and remotely wipeable. The program needs device inventory, repair, loss, rental/sale terms, consent, privacy notices, support

scripts, and return procedures.

Merchandise includes branded learning-zone carpets, posters, cards, books, apparel, cases, and future plush. Every product requires approved art, trademark review, supplier sample, safety documentation, costed landed price, inventory owner, fulfillment plan, and return/support process. A concept image is not a sellable product.

8. Partner onboarding and service model

A daycare or church partner receives discovery, readiness review, agreement, tenant setup, staff roles, privacy/consent setup, curriculum orientation, kit selection, pilot week, support channel, usage review, and renewal conversation.

Onboarding gates

1. Signed scope, pricing, privacy responsibilities, and decision owner.
2. Center license, staffing, ages served, hours, meal and emergency constraints recorded.
3. Tenant, roles, consent, bilingual preference, and data-retention settings configured.
4. Staff orientation and safeguarding review completed.
5. Materials, media, zones, and family communication accepted.
6. Pilot week observed; incidents, access barriers, and support requests logged.
7. Director signs operational acceptance or records the remediation plan.

Partner revenue, church expansion, licensing, merchandise, tablets, subscriptions, and training are future opportunities until written agreements, deposits, invoices, or renewal evidence exist.

9. Support and service levels

The initial support queue needs a named owner, monitored inbox, ticket category, severity, response clock, escalation path, and closure record. The suggested operating target is acknowledgement within one business day, subject to staffing and a published support commitment. Critical child-safety, privacy, or service outage issues escalate immediately through the center's emergency and incident process.

Support knowledge should include family login, staff invite, Kid Mode pairing, assignment/progress questions, bilingual content, device loss, media accessibility, billing, returns, and privacy requests. Every resolved ticket becomes a reusable support article only after human review.

10. Content and production intake

No episode, character message, printable, Spanish line, QR habit card, or merchandise file enters release without an owner, source/provenance record, rights status, developmental/safety review, accessibility check, and acceptance date. The production Bible controls canon, voice, gestures, visual continuity, episode status, and release package.

Forward production boundary: the national 12-episode / seven-minute season, related bulk tablet rollout, national marketing and partner expansion are Phase 2. The current pilot includes a finite $3,000 generation cap for pilot assets; it is not a quote to produce a complete season. The Higgsfield account audit records observed mixed-project activity and must remain separate from the pilot allowance. A future season budget requires an approved schedule, vendor quotes, rights, voice, bilingual adaptation, captions, editing, review, storage and delivery.

Approved finite character messages may cover handwashing, cleanup, kindness, asking for help, movement, and transitions. Messages are adult-selected or assigned. They do not diagnose, shame, threaten, make promises, or improvise beyond the approved library.

11. Financial linkage and procurement controls

The current gross model is linked to `investor/costs/pilot-budget.json`, the 234-line itemized CSV and the current workbook. Every line carries an item, quantity, rate, formula, bucket, evidence basis and source URL where one exists. Published references, supplier quotes and planning allowances remain distinct; a price with cents is not proof of a quote or payment. Each line must carry category, purpose, quantity, unit price, tax/shipping treatment, source or assumption, owner, timing, vendor/quote status, and acceptance evidence.

Before purchase: approve scope, validate quantity, obtain a quote or document the assumption, confirm delivery and acceptance criteria, assign budget owner, and record the invoice/payment. After delivery: inspect, record serial/license/asset data, attach acceptance evidence, and update forecast.

The pilot package does not propose a fixed loan amount or promise repayment. The current planning case is a one-location, 38-child, 12-month pilot (model pilot-38-v5.2): $286,007.37 recurring cost, $142,554.00 one-time cost, $21,383.10 contingency, and $449,944.47 gross

year-one requirement including contingency. The separate $140,000 owner-stated refinance-enabling need and the $347,911.98 planning cash estimate before financing are not approved or financeable loan amounts. The model shows a $162,694.93 peak deficit and a $23,833.95 cash floor. The owner serves as director, unpaid; 4 full-time caregivers and 1 part-time floater are paid $16/hour, with 4 caregivers on the floor in 2 groups of no more than 20. Caregivers hired as enrollment grows: 2 for up to 20 children, 3 for 21–30, 4 for 31–38 (Missouri 1:10, up to 4 two-year-olds per group; minimum two adults on site). Any additional classroom coverage beyond the four caregivers and floater is provided by the owner-director and a head of administration at no added payroll cost (owner, 2026-10-13). Anyone counted in ratio keeps Missouri records on file: background check, medical/TB report, orientation, 12 annual training hours (5 CSR 25-500.102, .122). Owner-set budgets: food and nutrition is capped at $2,000.00/month, with menus still meeting the Missouri meal pattern; toiletries and cleaning stay within $300.00/month ($3,110.18/year with paper towels halved); classroom and office consumables are halved to $1,599.87/year; utilities (electricity, gas, water/sewer) are locked at $1,500.00/month; tax preparation is $1,000.00/year; curriculum mapping is $7,500.00 one-time, and native Spanish review is $1,500.00 one-time, with no recurring curriculum or Spanish review fee; RN consultation is $2,000.00/year; administration is cut to $5,872.00/year (part-time bookkeeper); building upkeep is handled in-house (lawn, HVAC service, electrical, parking and staff mobile removed; snow halved). At the locked-in $210/week ($910/month) tuition and 96% collection, year-two operating margin is $112,354.23 before building payment or debt, and operating break-even is $651.16 tuition per child per month. The building payment and lender terms are unknown, so no loan affordability or profit after debt is claimed. Net cash turns positive in month 6; cumulative pilot cash turns positive in month 24 at the month-12 rate, before building payments and debt. No equity is offered; any debt terms require verified operating evidence and a written lender offer.

12. Staffing and accountability

The operating plan needs named owners for creative/canon, production, curriculum, bilingual review, health/food, engineering/security, operations, family support, finance, and counsel. A title without a person, scope, hours, rate, start date, or acceptance deliverable is not a staffed role.

The founder owns mission and final creative decisions. The production lead owns schedule and vendor handoffs. Curriculum and bilingual leads own educational and language acceptance. Health/food reviewers own their professional scope. Engineering owns platform and security evidence. Operations owns center delivery, support, inventory, and partner onboarding. Finance owns every model line and cash forecast. Counsel owns contracts, privacy, employment, licensing, and financing terms.

13. Expansion and residual opportunities

Expansion should follow evidence, not aspiration:

1. Pilot center ages 2–5 proves routines, support burden, family engagement, and safe data handling.
2. A second daycare or church pilot tests partner onboarding and tenant isolation.
3. Partner kits, training, subscriptions, merchandise, QR habit packs, tablets, and licensing are priced from actual support and fulfillment cost.
4. Multi-site reporting, renewals, and aggregate outcomes are added only after the operating model is repeatable.

Potential recurring or residual revenue includes center/platform subscriptions, church and daycare implementation fees, staff training, curriculum refresh, family memberships, device rental/management, device sales, learning-zone kits, branded merchandise, books/cards, licensing, production services, and approved partner programs. None should be included as secured receipts without evidence.

14. Acceptance register

Gate	Evidence required	Owner	Status
Pilot scope	Signed location/ages/hours/staff assumptions	Operations	Open until signed
Platform hosting	Production URL, environment record, monitoring	Engineering	Open until verified
Role isolation	Two-tenant and role test report	Security/engineering	Open until retested
Curriculum	Educator review and approved release manifest	Curriculum lead	Draft/review
Spanish	Native educator review and approved line sheet	Bilingual lead	Draft/review
Health/food	Professional review, allergy and menu controls	Health/food lead	Scope-limited

Gate	Evidence required	Owner	Status
Content	Script, animatic, render, captions, rights, safety	Production	Episode 101 pending
Tablets	Device sample, MDM, pairing, wipe, safety, terms	Operations/engineering	Planning assumption
Merchandise	Supplier sample, safety, landed cost, fulfillment	Product/ops	Proposed
Finance	Quote/assumption ledger and cash forecast	Finance	Gross model reconciled; receipts, staging, and financing-cost validation pending
Partner launch	Training, pilot observation, acceptance sign-off	Partner success	Future

15. Source and contradiction map

Topic	Current source	What it proves	What it does not prove
Public offer and family pages	Current Futures Friends website	Published positioning and visible content	Hosted LMS, persistence, accreditation, or signed demand
Character and production canon	Current production Bible and restored Bible content	Names, pillars, story engine, gates	Finished animation or cleared rights
Education and kitchen	Operations and education companion sources	Working routines and frameworks	State approval, CACFP certification, medical advice
Platform claims	Local Hub/site work and audit notes	Implemented or previewed components where specifically evidenced	Production hosting, all-browser acceptance, security attestation
Costs	Full Cost Model JSON, workbook, CSV	Itemized planning prices and evidence basis	Vendor quotes, invoices, funding availability
Financing	Financial reconciliation	Proposed amount and gross model relationship	Agreed lender terms, receipts, repayment offer
Historical PDFs	Original 35-page Bible and 117-page companion	Prior depth and source history	Current status when contradicted by this master

16. Open decisions before investor or partner commitments

- Confirm the cash forecast and whether scope is staged to the proposed loan.
- Obtain quotes for allowance lines and distinguish quotes from published prices.
- Decide the first hosted production environment and complete role/persistence/backup testing.
- Name professional reviewers and record their exact scope.
- Lock Episode 101 script, timing, voice, art, rights, and bilingual lines.
- Decide the tablet model, management provider, safety documentation, and rental/sale terms.
- Approve partner pricing only after pilot support and fulfillment cost are measured.
- Keep all historical financing scenarios visibly superseded.

This companion is ready for visual integration once the owners above convert the open gates into dated evidence.

Current production-finance control note

Before batch production, approve a seven-minute episode, two QR clips and one bilingual promo. Record accepted-shot yield, rights, review and complete finishing costs. The account audit and budget reconciliation distinguish observed usage from planning allowances.

Original reference material

The complete original document follows for its narrative, curriculum and operational detail. It carries no pilot financial figures: the current controls at the front, the 234-line pilot register (model pilot-38-v5.2) and the 12-month pilot cash schedule govern every number. Partner, licensing, tablet and merchandise receipts described in it are Phase 2 opportunities, not pilot financing.

A program a partner can use

Futures Friends brings the story, classroom routine and family connection into one recognizable program. This volume puts the implementation work beside the promise: what a teacher prepares, how a partner starts, who handles support, what the portal must protect, and what must be proved before a recurring fee begins.

The two manuals below consolidate the twelve supporting Program Library documents. They retain worked lessons, menus, adaptations, training evidence, onboarding forms, sales scripts, renewal controls and launch gates. Duplicate introductions and retired promises have been removed; the source and omission registers identify those decisions. The merchandise exhibit preserves all 54 supplied design pages.

Release snapshot - October 8, 2026

Area	Current evidence	Release condition
Website	Public pages checked October 8; demonstration	Customer journeys still require acceptance testing
Curriculum	12 monthly units / 48 theme weeks; Units 1-11 draft; Unit 12 in writing; no recorded approvals	Named educator and safety review
Bilingual resources	Eight Spanish family resources in draft	Human language and cultural review
Academy	37 browser-local preview modules; hours not state-approved	Assessment, reviewer and accepted content
Hub and portals	Public previews; six feature families locally tested with made-up data; production Hub not hosted	Tenant, role, persistence, backup and recovery acceptance
Store	Design catalog present; order requests configured; payment checkout unconfigured	Supplier terms, product safety, fulfillment and checkout acceptance
Recurring billing	Proposed provider prices	Live tenant and delivered Unit 2; signed scope and billing terms

Partner expansion and repayment

Partner daycares and churches are Phase 2 opportunities, not part of the pilot repayment plan. Monthly curriculum licenses and support can renew; setup, training seats and merchandise create separate receipts, each evaluated on its own unit economics. Unsigned partner, licensing or merchandise receipts are excluded from debt underwriting; the current controls at the front of this document and the pilot register govern every financial figure.

For each account, the operations record must connect the signed scope to setup delivery, settled payment, recurring support cost, renewal and cancellation. Church scope must identify weekday, Sunday or midweek use, staffing, access, storage, safeguarding and pickup responsibilities. Keep deposits tied to deliverables; do not use gross catalog prices as cash available for repayment.

October 8 verification update

The retained internal snapshot describes six Hub feature families as locally tested with made-up data. Public Hub pages checked October 8 remain sample-data demonstrations. That is progress beyond a paper concept. The hosted tenant, role, persistence, backup and recovery tests remain acceptance work. The LMS is locally tested; its training is not represented as Missouri-approved self-paced credit. Classroom Live and director figures are sample previews. Meal-intake records do not establish an official CACFP point-of-service or claim submission system.

The current store configuration uses request mode. Payment credentials and checkout links are unconfigured. A request is not a settled sale or fulfillment proof. The current releases must pass the acceptance gates below before those capabilities are sold as operational services.

Proposed request handling: the founder owns the sales queue until a customer-success lead is appointed. Acknowledge each request within one business day, record its owner and next step, and test receipt and follow-up before publishing that response commitment. A monitored inbox and response performance have not yet been verified.

What the teacher receives

Unit 1 branded binder presentation from the current curriculum review set. Draft material; educator review is not recorded.

The program has to work on a busy morning. The classroom manual below provides the plan, preparation, adaptations, observation and family connection behind the branded materials.

Education & classroom practice

Working implementation manual

Lesson sequences, food and movement, educator practice and family connection.

EVIDENCE KEY

Verified: source or test recorded. Configured: setup exists. Proposed: terms to agree. Planned: delivery or acceptance outstanding. Each claim carries its own status in the text.

LEARN | MOVE | EXPLORE | BELONG

Working status and how to use this manual

This companion consolidates the center curriculum, storybook series, Eat the Rainbow Kitchen, teacher training, and summer/holiday planning material into one operating reference. It is written for a director, lead teacher, home provider, cook, coach, and family-facing support person. The source libraries were prepared as program drafts. The current site manifest is the controlling status record for what is published.

Public pages checked October 8 list 12 monthly curriculum units and 48 theme weeks: Units 1-11 draft, Unit 12 in writing, no recorded approvals. The kitchen offers 36 recipes across three levels and menu planning; CACFP design references do not establish certification. The family library lists 27 activities and 17 printables, including eight Spanish drafts. The Academy has 37 browser-local preview modules; enrollment is not open and hours are not state-approved credit. The earlier four-session video schedule remains a proposed production format, not proof of completed episodes.

Use the labels in this document carefully:

- **Current** means supported by the current manifest or a dated owner decision.
- **Working** means a usable design awaiting the review named in its gate.
- **Draft** means written or assembled but not accepted for release.
- **Proposed** means an option for a partner or owner to approve.
- **Retired** means retained for history but not a current promise.

A director may use the working routines in this manual to plan a classroom. The director remains responsible for licensing ratios, health rules, allergies, food service, supervision, emergency procedures, and local requirements. Futures Friends provides a program structure; it does not replace a license, a qualified health professional, a food program, an individualized plan, or an inspection.

1. The daily operating model

Futures Friends gives a day a recognizable shape without forcing every center into one schedule. The core loop is **Watch, Talk, Do, Play, Reinforce, Take Home**. The screen is a short invitation. The teacher supplies the relationship, materials, observation, adaptation, and return to play.

A sample day

Block	Adult action	Child action	Evidence to keep
Arrival	Greet each child by name or preferred communication; offer a visual choice.	Chooses a first area, observes, or stays with a trusted adult.	Brief transition note when support is needed.
Morning connection	Preview the picture schedule and introduce the week's word, character, or object.	Points, repeats, signs, moves, or listens.	No score; note access and interest.
Short story	Show one current video or use the storybook/audio alternative. Pause once or twice for a concrete question.	Watches, predicts, imitates a gesture, or elects not to answer.	Record the episode/unit version used.
Talk and do	Offer the object or picture from the story. Use one prompt, then wait.	Tests, sorts, builds, compares, or tells a peer.	Capture the child's action in factual language.
Movement	Use a copyable movement such as Turtle Tempo, Sun Stretch, Heart Hands, or a transition walk.	Moves at a comfortable pace; uses a seated, supported, or low-stimulation option.	Note adaptation only when it changes access.
Meal/snack	Serve safely, model family-style language, and respect refusal.	Names, chooses, passes, tastes if ready, or observes.	Menu, substitution, temperature and allergy records remain in the center file.
Learning zones	Open two or more zones connected to the idea.	Repeats the idea through play, art, books, sensory work, or construction.	Photograph materials only under center consent rules.
Closing	Ask what changed or what the child wants to try next.	Shows, tells, points, or leaves a mark.	Take-home cue selected for family.

The current public rhythm limits the video program to four six-minute sessions Monday through Thursday for ages three and up. Friday is available for screen-free retelling, project completion, family connection, outdoor work, and teacher reflection. Two-year-olds may use the objects, songs, picture cards, and live retelling without being expected to watch or answer on the older-child schedule.

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

Week-at-a-glance planning

Day	Primary purpose	Example adult question	Screen-free continuation
Monday	Introduce the problem or word.	“What do you notice first?”	Match pictures or objects.
Tuesday	Repeat through body and materials.	“What could we try next?”	Build, sort, carry, or act it out.
Wednesday	Change one variable.	“What changed when we moved it?”	Compare two arrangements or sounds.
Thursday	Share the strategy.	“How could you show a friend?”	Teach-back, partner work, or family card.
Friday	Reflect and extend without scheduled video.	“Where else could this help?”	Outdoor, bookmaking, cooking, or family event.

The teacher need not force the exact sequence. A child’s transition, sensory needs, weather, staffing, or meal schedule may move a block. What matters is that the story idea returns in a real action and that the adult does not use the video as unsupervised childcare.

2. Learning zones and material preparation

The four zones are a common language across the classroom: READ, BELONG, EXPLORE, and PLAY. The current kit phrase is **Learn. Move. Explore. Belong.** The zone names may appear in a center’s environment, but the materials must be usable without purchasing every add-on.

READ / Booker

Purpose: language, listening, story order, vocabulary, marks, and confidence trying a word. Prepare a small basket of books, sequence cards, a red book prop or equivalent picture book, writing tools, name/photo cards, and a place where a child can listen without being required to perform. Invite a child to point to first/next/last, make a sound, retell with objects, or choose a picture. Avoid correcting every pronunciation. Model the word naturally and give a second route: gesture, drawing, home language, AAC, or showing the object.

BELONG / Lumi

Purpose: greeting, emotional vocabulary, turn taking, noticing another person’s boundary, and making space. Prepare family photos only with consent, choice cards, dolls or figures with varied communication modes, a turn object, and a calm place that is not punishment. A teacher can ask, “Do you want space or company?” and honor the answer. The zone is not a compliance station and should not require a child to disclose a private feeling publicly.

EXPLORE / Zuri

Purpose: observation, prediction, comparison, nature, science, and questions. Prepare large safe natural objects, trays, magnifiers, water only with direct supervision, color or shape cards, and a place for a child's hypothesis. Start with "I notice" before "Why." A child can investigate a leaf, a shadow, a texture, a ramp, or a sound. Adult handling is required for small parts, heat, tools, water depth, and food allergens.

PLAY / Bop

Purpose: movement, practical jobs, construction, independence, and trying again. Prepare large blocks, baskets, floor markers, carrying jobs, fabric, hoops, and a cleanup cue. Bop's zone does not mean "burn energy." It gives a child meaningful control over force, speed, balance, and sequence. A seated child can push, pull, reach, drum, direct a peer, or choose the slow version. Printed puppets and picture cards are the initial physical classroom direction; plush requires a separate safety gate.

Zone setup checklist

Before children arrive, the adult checks: routes are clear; materials are age- and size-appropriate; picture labels are at child height; sharp, hot, choking, and allergen risks are removed or controlled; there is a quiet option; each zone has a start point and a return basket; a nonverbal participation route is visible; and the activity can be stopped without leaving a child stranded. At closing, the adult counts pieces, records damage, returns materials, and logs any incident through the center's established process.

3. Storybooks as classroom tools

The public Story Time area lists five books in development. Digital layouts and illustrations support read-aloud planning, but do not establish a released edition. Use only an accepted version with the necessary classroom permissions; a polished page or page count does not establish a printed book, completed production or fulfillment readiness.

Read-aloud sequence

1. **Preview:** show the cover or first image and name one object. Do not explain the entire moral.
2. **Read:** use a natural pace, pause for gaze and gesture, and preserve the child's opportunity to notice.
3. **Turn:** ask a concrete question such as "Where did the red book go?" or "Which way could Bop carry it?"
4. **Act:** give the child an object, mark, movement, or choice connected to the page.
5. **Return:** revisit one page later in the day, at pickup, or in a home message.
6. **Document:** record the version used and any accessibility alternative.

For two-year-olds, shorten the read-aloud, name objects, repeat the same line, and let the child handle a safe prop. For older preschoolers, add retelling, prediction, comparison, and a peer teach-back. Never turn the story into a test of memory.

Storybook-to-zone map

Storybook use	READ	BELONG	EXPLORE	PLAY
Booker notices a missing step	Sequence cards	Ask a peer before helping	Test two orders	Carry the pieces in order
Lumi offers a listening spot	Retell who spoke	Choose space/company	Compare quiet and loud safely	Follow a stop/go cue
Zuri follows a clue	Add a new word	Share the discovery	Observe, predict, test	Move along a marked path
Bop changes his method	Draw first/next	Ask for a partner	Compare stable/unstable bases	Build, carry, rebuild

4. Meals and Eat the Rainbow implementation

The cookbook source organizes food into rainbow bands and provides Level 1, Level 2, and Level 3 recipes, four-week menus, shopping lists, prep-day guidance, family-style service, and child-safe kitchen jobs. Those materials are a strong working framework, but a center's qualified food lead must verify current CACFP requirements, ingredient records, allergy plans, choking-safe preparation, substitutions, and local rules before service. The brand's color language is educational; it is not a medical claim.

Rainbow bands

Band	Examples from the source	Child-facing language	Safety note
Red	Strawberries, tomatoes, soft red pepper, marinara, watermelon	Heart helpers	Prepare texture and size for age; verify allergies.
Orange	Carrot, sweet potato, squash, mandarin, cantaloupe	Super sight	Cook or cut as required; adult handles knives.
Yellow	Banana, pineapple, egg, corn, yellow pepper	Sunny energy	Check texture, temperature, and egg allergy.
Green	Broccoli, spinach, peas, beans, cucumber, kiwi	Growing strong	Offer cooked or safely prepared forms.
Blue/purple	Blueberry, black bean, grape, beet	Brain boost	Grapes and similar round foods require approved choking-safe preparation.
White/tan	Milk, yogurt, cheese, chicken, fish, whole grains, beans	Strong bones	Verify dairy, fish, wheat, and cross-contact controls.

Adults should say “This food is red” or “Would you like to smell or touch it?” rather than promising that one color heals or prevents illness. Children may refuse, taste, spit out, or try another day. A “Tried It” chart is an invitation, never a public ranking.

Five-day sample menu framework

This sample shows how a center might organize a week. It is not a substitute for a registered dietitian, CACFP crediting review, or the center’s approved menu.

Day	Breakfast	Lunch	Snack	Learning connection
Monday red	Whole-grain toast, yogurt, soft strawberry pieces	Bean or chicken marinara, whole grain, cooked vegetable, fruit, milk	Watermelon or approved substitute with whole-grain cracker	Name red; pass the bowl; count pieces.
Tuesday orange	Oatmeal, banana, milk	Soft sweet potato, protein component, whole grain, green vegetable, milk	Mandarin segments prepared safely, yogurt	Compare soft/crunchy; notice warm/cool.
Wednesday green	Whole-grain cereal, milk, kiwi or approved substitute	Bean bowl, rice, cooked broccoli or peas, fruit, milk	Cucumber prepared for age with dip if approved	Ask “What changed when it was cooked?”
Thursday blue/purple	Whole-grain pancake, blueberries prepared safely, milk	Chicken or bean entrée, grain, beet or purple fruit, milk	Blueberry yogurt or approved alternative	Sort colors; use “same/different.”
Friday white/tan	Egg or approved alternative, whole grain, fruit, milk	Fish/chicken/bean component, grain, vegetable, fruit, milk	Cheese/yogurt or approved alternative	Screen-free family-style routine and review.

The adult records substitutions on the same day, keeps product labels or crediting records, logs temperatures, and confirms that the child’s individual allergy plan is visible to the staff who serve food. The classroom teacher does not improvise a replacement for a medically restricted food.

Recipe card standard

Every recipe intended for a partner kitchen should identify yield, serving size by age band, ingredients by weight or usable measure, preparation steps, equipment, holding temperature, allergen flags, approved substitutions, choking preparation, CACFP crediting information, source/date, and reviewer. “Healthy” is not enough. A recipe without portion, allergy, and crediting evidence remains a draft.

Kitchen and child jobs

Children may wash a large produce item, tear a soft leaf, stir a cold mixture with an adult, count napkins, carry an empty cup, choose between two approved options, or describe color and texture. Adults handle knives, heat, appliances, raw proteins, boiling liquid, chemical cleaning agents, and any step where the child cannot maintain safe control. A teacher sets a small job, models it once, and lets the child stop. Food play cannot compromise meal service or hygiene.

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

5. Movement and adaptations

Movement belongs throughout the day. The program may show a six-minute video, but the center does not treat six minutes as the whole physical-activity plan. Teachers use transitions, outdoor play, carrying, reaching, balance, rhythm, dance, cleanup, and child-led gross motor time. The source routines include Turtle Tempo, Sun Stretch, bunny breaths, stop/go contrasts, counting chants, and call-and-response movement.

A daily movement menu

- **Arrival:** reach for a picture, carry a bag to a hook, or choose a seated greeting gesture.
- **Transition:** walk, tiptoe, roll, wheel, march, or use a visual route between areas.
- **Story response:** copy one gesture from Booker, Lumi, Zuri, or Bop, then choose a variation.
- **Before meal:** handwashing sequence, shoulder roll, breath, and a quiet carry job.
- **Outdoor:** push, pull, climb only on approved equipment, run where permitted, observe nature, or direct a partner.
- **Regulation:** slow turtle walk, wall push, hand press, rocking, breathing, or a quiet visual timer.
- **Closing:** show one action from the day or place a movement card in the take-home envelope.

For a child who uses a wheelchair, walker, orthotic, AAC, hearing device, or visual support, the adult adapts the action rather than removing participation. A seated reach, eye gaze, switch, drum, partner-directed movement, or hand-over-hand support only with appropriate consent may carry the same story idea. Never force a stretch, balance pose, breath, or physical contact. The child’s family and qualified specialists guide individualized adaptations.

6. Training and educator practice

The Academy catalog currently contains 37 internal draft modules across foundations, classroom practice, leadership, director, kitchen, home, and trainer themes. It is a product design and onboarding library. The program must not call it an external certification, state-approved clock-hour course, CDA credential, or accreditation pathway until the relevant authority has approved that specific offering.

Suggested internal learning path

Stage	Learner	Practice focus	Evidence of completion
Orientation	New staff and substitutes	Brand promise, child safety, portal role, daily loop.	Knowledge check and first-week checklist.
Classroom foundation	Teachers and floaters	Zones, story pause, positive guidance, adaptations.	Observed routine and coaching note.
Lead practice	Lead teachers	Weekly planning, observation, family bridge, material prep.	Completed week plan and observed teach-back.
Director operations	Directors	Onboarding, staffing, records, support escalation, release acceptance.	Role-specific scenario review.
Kitchen practice	Cook or food lead	Menu records, ingredient verification, safe jobs, substitution log.	Reviewed sample menu and safety walkthrough.
Coach/trainer	Internal mentor	Feedback, model lesson, evidence review, escalation.	Mentor observation and calibration conversation.

An assessment should measure whether the adult can make the program safe and usable. A multiple-choice score alone cannot show that a teacher can wait for a child's response, set a calm invitation, adapt an activity, or record an objective observation.

Observation rubric

Use four levels for internal coaching only: **not yet seen**, **emerging**, **consistent**, and **models for others**. Review these domains:

1. **Access:** materials and communication routes are available.
2. **Relationship:** the adult greets, waits, listens, and avoids shame.
3. **Learning loop:** the story connects to a real object, action, or question.
4. **Child agency:** the child can choose, repeat, stop, or try a different route.
5. **Safety:** food, movement, materials, supervision, and privacy are handled correctly.
6. **Documentation:** notes describe actions and context, not labels or diagnoses.
7. **Family bridge:** the take-home cue is clear, optional, and culturally respectful.

A coaching note should name one observed strength, one specific next move, and the support the director will provide within thirty days. It should not rank children or staff publicly. If a safety issue appears, the director follows the center's immediate incident process before coaching language.

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

7. Family engagement and language access

A family message can be one sentence, one question, and one optional action. Example: “Today we noticed how a wider base helped the blocks stay up. Ask your child what could make a tower steadier. You can try with cups, boxes, or pillows.” The message avoids requiring a purchase, a screen, or a particular family structure.

The current manifest identifies Spanish printables as draft translations. The team should keep English and Spanish source copy aligned, then obtain native-speaker review for vocabulary, tone, regional clarity, captions, and instructions. A translated PDF is not approved merely because it opens or resembles the English layout. Families can participate in their preferred language; educators should use visual, gesture, object, and home-language routes while translation is pending.

Family engagement can include:

- weekly take-home card;
- Story Time link or approved screen-free retelling;
- “show us” photo or drawing only under consent and privacy rules;
- family recipe or color conversation;
- monthly zone invitation;
- transition conference using factual observations;
- seasonal event with a quiet and non-food participation route.

Never require a family to disclose income, immigration status, diagnosis, religion, or private feelings to participate in a curriculum activity. Photos, names, and child work belong under the center’s consent and retention rules.

8. Summer, holiday, and seasonal extensions

The source library proposes ten summer weeks, fourteen seasonal units, and four family events. These are add-on program concepts, not proof that every kit, script, printed piece, or supply box is complete. Each week follows the same structure: a welcome, a story or read-aloud, a hands-on activity, movement or outdoor time, an Eat the Rainbow tie-in, a family piece, and a Friday event or reflection.

Summer week cards

Week	Lead idea	Core activity	Safety and inclusion check
Rainbow Garden	Grow and notice	Plant, sort, observe, and draw.	Soil, tools, sun, water, and allergy review.
Splash and Science	Water changes things	Pour, float, sink, and compare.	Shallow supervised water; mobility and sensory options.
Bop’s Sports Week	Move together	Stations for roll, carry, aim, and rest.	No elimination; adapt every station.
Booker’s Story Camp	Make a story	Story walk, props, sequence, and family page.	Communication choices and quiet retreat.
Lumi’s Friendship Fair	Make room	Cooperative games and welcome signs.	Avoid forced public sharing or touch.
Bug Explorers	Observe living things	Safe looking, sketching, and habitat care.	No handling without local safety review.
Kitchen Camp	Food and process	Wash, tear, mix, and color talk.	Qualified food lead, allergens, heat, knives.
Under the Sea	Pattern and movement	Ocean sounds, sorting, and wave movement.	Noise and sensory volume options.
Space Explorers	Imagine and measure	Build a route, count, and compare.	Avoid dark-room fear; offer light and mobility routes.
Friends Olympics/Carnival	Celebrate participation	Cooperative stations and family showcase.	No winners-only structure; weather and crowd plan.

Seasonal selection rules

A seasonal unit must be reviewed for historical accuracy, cultural respect, family choice, noise, costume, food, and religious neutrality. The source titles include Back to School, Fall Harvest, Costume and Kindness, Gratitude, Winter Celebrations Around the World, New Year, Dr. Martin Luther King Jr. kindness and fairness, Kindness Week, Black History Month, Spring and Earth Week, Week of the Young Child, Family Day, Juneteenth, and Fourth of July community themes. The appropriate use of a title depends on the center’s community, local calendar, and content review. No unit should turn a living culture or historic struggle into a costume, color, or craft stereotype.

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

Family events

The four source events are Fall Festival, Winter Showcase, Spring Rainbow Picnic, and Summer Carnival. A usable event plan names the purpose, arrival route, quiet space, food controls, weather backup, accessibility options, adult-to-child supervision, photo consent process, cleanup, and family take-home. A family event is successful when a child can participate without performing on stage, eating a particular food, wearing a costume, buying merchandise, or appearing in a photograph.

9. Operational templates

Weekly plan card

Classroom / teacher / week: _____

Unit and theme: _____

Lead character or pillar: _____

Book or episode version: _____

Child action we will invite: _____

Materials and adult-only steps: _____

Screen or screen-free option: _____

Movement option and adaptation: _____

Food or color connection: _____

Observation focus, written as an action: _____

Family bridge: _____

Children’s communication routes: _____

What changed after the first attempt: _____

What we will adjust next week: _____

Objective observation note

Child / date / observer: _____

Context or zone: _____

What happened, in the child’s own action or words: _____

What materials or support were available: _____

What the child chose next: _____

Possible next invitation: _____

Family or specialist input to consult: _____

The form should not include a diagnosis, a ranking, a prediction about future ability, or an unsupported conclusion.

Menu and kitchen closeout

- Confirm the approved menu and age-appropriate preparation.
- Check ingredient labels, allergy list, substitutions, and cross-contact controls.
- Record preparation and holding temperatures according to center policy.
- Mark substitutions on the same day.
- Keep crediting and product records in the required file.
- Sanitize surfaces and secure adult-only tools.
- Record the child-facing color or language connection only after the safety work is complete.

Friday screen-free closeout

- Retell one short story with objects or a book.
- Offer the week’s movement in a calm and an energetic form.
- Let children choose one zone to revisit.
- Finish or display a child-made representation without ranking it.
- Send one optional family question.
- Review materials, incidents, adaptations, and next-week needs.

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

10. Source map and restoration decisions

Source	Material restored here	Status decision
Futures_Friends_01_Center_Curriculum.txt, pp. 3-104	Daily loop, zones, age bands, planning, observation, inclusion, family engagement, standards and safety headings	Working curriculum structure; old claims about tested sites, licensing, or approval require evidence.
Futures_Friends_02_Storybook_Series.txt	Read-aloud sequence, story-to-zone use, page and family bridge logic	Current digital Story Time use; print availability remains manifest-controlled.
Futures_Friends_03_Eat_the_Rainbow_Cookbook.txt, pp. 3-93	Rainbow bands, recipe-card fields, level model, menu workflow, safe child jobs	Working food framework; qualified food and CACFP review required.
Futures_Friends_04_Teacher_Training_Certification.txt, pp. 3-75	Training ladder, role pathways, observation rubric, internal assessment logic	Internal Academy draft. External credential, state approval, clock hours, and certification claims are not current.
Futures_Friends_07_Summer_Camp_and_Holiday_Units.txt, pp. 4-93	Ten summer cards, seasonal selection rules, family-event controls	Add-on concepts and planning material; kit completeness and release status require proof.
current-site/release-manifest.js, version 2026-10-07.5	Current ages, video rhythm, Unit 1-12 status, Spanish status, 37 Academy modules	Controlling status record for current claims.

Omitted or retired source detail

- Source language describing plush as a routine classroom component is retired; initial physical materials are printed puppets and picture cards, with plush safety-gated.
- Source wording that calls the Academy “Certified Educator,” promises DESE/MOPD or other clock hours, or implies a credential is retired from investor-facing current claims until approval exists.
- Source schedules that imply a different video cadence are superseded by the current four six-minute Monday-Thursday rhythm.
- Specific recipe prices, reimbursement margins, equipment costs, and center-size assumptions are not carried forward as current numbers; they need dated local quotes and a financial model.
- Statements that the curriculum was “built and tested” across named sites are not promoted without dated implementation evidence.
- Seasonal titles are retained as planning concepts, but any cultural, historical, food, costume, or celebration treatment must pass a current content review.
- The source’s “at most 24 minutes” language is retained only for the current four-session rhythm; it is not a medical or developmental screen-time guarantee.

- Old claim language about national standards, state approval, accreditation, or professional credentials is retained as a research question, not as a completed benefit.

11. Unresolved release questions

1. Which Unit 1 daily plans have passed educator, safety, language, and owner review?
2. When will Units 1-11 move from draft to accepted, and what evidence closes that gate?
3. What is the final age presentation for twos, threes, and pre-K on each lesson card?
4. Which eight Spanish resources have native-speaker approval, and where is the review record?
5. Which of the 37 Academy modules are available internally, and which remain outlines?
6. Who owns menu crediting, allergy review, recipe substitutions, and local kitchen compliance for each partner?
7. What materials are included in each paid summer or seasonal add-on, and what is the replacement policy?
8. Which family-event photographs, child records, and portal artifacts are retained, by whom, and for how long?
9. What partner evidence supports the transition from a working curriculum to a repeatable center implementation?

This companion is ready to serve as a detailed working manual once each named owner review is completed. It should not be presented as evidence of accreditation, finished media, manufactured kits, or accepted training until the release records say so.

12. Four worked lesson plans

The following cards show the level of specificity expected from a release-ready lesson. They are working examples derived from the source library; they are not evidence that all twelve units have been reviewed.

Lesson A - Booker: first, next, last

Invitation: Place three large picture cards beside three familiar objects. Ask children to choose which object belongs first in a simple routine. The adult demonstrates once, then waits.

Two-year-old route: Use two cards instead of three. Name each object, let the child touch or move one, and accept pointing or eye gaze. Repeat the same words rather than adding a quiz.

Three-to-five route: Invite children to arrange three cards, tell the sequence to a partner, and change one card to see whether the routine still works. The adult asks, “What changed?” rather than “What is the right answer?”

Materials: large laminated cards, three safe objects, floor strip, basket. No loose tiny pieces. Keep the strip accessible from standing, sitting, or floor level.

Movement: Children carry one object to the matching card or direct a partner who carries it. A child who cannot carry can point, use a switch, or place a card.

Language: first / next / last; before / after; I notice; I can try.

Observation: Record whether the child used a gesture, word, object, or partner direction to communicate sequence. Do not record “understands sequencing” without the action.

Family bridge: Ask the family to name two steps in getting ready for bed or leaving home. The child may draw, point, or act it out.

Lesson B - Lumi: space or company

Invitation: Offer two large cards, “space” and “company,” and model asking before joining a child’s block arrangement. The adult accepts either answer and models returning later.

Two-year-old route: Use a simple wave, stop hand, or move-away gesture. A trusted adult narrates: “You said stop. I will wait.”

Three-to-five route: Let a child choose a partner, ask a question, and make a plan for rejoining. Practice with puppets before a live peer interaction.

Materials: choice cards, two puppets or picture figures, floor boundary, calm object. Avoid using a child’s real photograph unless consent and privacy controls permit.

Movement: Heart Hands may be done standing, seated, with one hand, or by choosing a picture. It is an invitation to regulate, not a required emotional performance.

Language: space, company, wait, join, not yet, yes, no, later.

Observation: Note whether the child noticed another person’s signal and changed distance or pace. A refusal is a valid communication result.

Family bridge: Send a question about how family members ask to join a game. The card should offer “show, point, or tell.”

Lesson C - Zuri: prediction and test

Invitation: Place two large objects on a safe ramp or floor path. Ask children which will move farther, then test one at a time. The adult names what happened without announcing a winner.

Two-year-old route: Use “go” and “stop,” one object, and a short repeat. Let the child push, watch, or signal the adult.

Three-to-five route: Children predict, test, compare, and change one feature such as surface or starting position. Adult controls speed, height, and object size.

Materials: large balls or blocks, low ramp, tape start line, prediction cards, tray. No small marbles, inaccessible water, or unapproved elevated equipment.

Movement: A child can roll, release, point to the start, or be the observer who says “again.”

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

Language: I wonder, predict, farther, closer, same, different, try again.

Observation: Record the child's prediction and what evidence they referred to, if any. A wrong prediction is useful information, not a failure.

Family bridge: Find two safe objects at home and compare how they move on the floor. Adult supervision remains required.

Lesson D - Bop: two-step job

Invitation: Give Bop's job card: carry the empty basket, then return it to the marked place. Add one optional partner role.

Two-year-old route: Use one step at a time with an adult hand signal. Celebrate completion through a smile, wave, or choice of next job.

Three-to-five route: Ask the child to recall both steps, complete them in order, and teach the route to a peer. If the child rushes, offer Turtle Tempo or a visual "first/then."

Materials: large empty basket, floor marker, job card, optional fabric blocks. The job must never involve chemicals, hot items, sharp tools, or carrying another child.

Movement: Offer carry, push, pull, reach, or directing. A child with limited mobility can be the route caller or place the card in a finished pocket.

Language: first, then, finished, help, together, slow, ready.

Observation: Record which prompt or visual let the child complete the sequence. Do not label impulsive behavior without context.

Family bridge: Ask the child to choose one safe two-step home job, such as put cup on table then bring napkin.

13. Staff launch and 30-day coaching plan

A partner center should not receive a curriculum folder and be expected to improvise the implementation. The source training library supports a staged launch. The exact subscription service and support agreement belong in the business document; this manual defines the educational work.

Before children use the program

The director identifies a program owner, lead teacher for each room, kitchen or food lead, portal administrator, and backup contact. The owner confirms licensing boundaries, age groups, ratios, emergency procedures, allergies, consent, device access, and where printed materials will be stored. Staff preview the current lesson version and know whether it is draft or accepted. The director tests the screen-free alternative before the first screen session.

Days 1-7: orientation

Staff learn the phrase Learn. Move. Explore. Belong., the four zone purposes, the Watch-Talk-Do-Play-Reinforce-Take Home loop, and the rule that a child may participate by speaking, pointing, moving, using AAC, using another language, watching, or returning later. The director observes one arrival, one story pause, one meal transition, and one cleanup. Feedback stays concrete: “You waited four seconds after the question,” not “You were engaging.”

Days 8-14: guided practice

The lead teacher plans one week card. A coach watches the teacher connect one story to one object and one movement. The teacher tries the same invitation with two age routes. Staff compare observation notes and remove labels. The kitchen lead rehearses the substitution and temperature record. The portal administrator confirms that staff see only the records their role needs.

Days 15-21: adaptation

The team chooses one child-access question: sensory load, mobility, communication, language, or transition. Staff modify the materials and document what changed. The coach observes whether the child gained access without being singled out. The director checks that the family message does not expose private information or require a purchase.

Days 22-30: review

The team reviews the week card, child actions, family response, material condition, meal records, movement access, and any support requests. The director closes the first-month review with one practice to keep, one practice to adjust, and one resource to add. A draft module remains draft if evidence is missing; completion is not inferred from attendance.

14. Program quality review

A monthly quality conversation should use four questions:

1. **Can children get in?** Check routes, visual schedules, language, sensory load, materials, and communication.
2. **Can children do something real?** Check that the story connects to objects, play, movement, meals, or relationships.
3. **Can adults keep it safe?** Check supervision, food controls, materials, privacy, and incident response.
4. **Can the team prove what happened?** Check version, observation, family bridge, support request, and acceptance record.

The team may sample one lesson, one menu item, one movement invitation, one family message, and one portal record. The purpose is improvement, not surveillance of children. Any serious safety, privacy, or licensing issue is escalated immediately through the center’s established authority.

Monthly review table

Evidence	Question	Owner	Action if incomplete
Current lesson version	Did staff use the accepted card?	Lead teacher	Replace stale print and notify director.
Observation note	Does it describe action and context?	Coach	Rewrite without diagnosis or ranking.
Menu record	Are substitutions and ingredients traceable?	Food lead	Correct file and review service controls.
Movement plan	Is there an accessible option?	Lead teacher	Add seated, low-stimulation, or partner route.
Family message	Is it optional, clear, and private?	Director/family lead	Revise before sending.
Portal record	Can the authorized role find it?	Portal admin	Escalate permissions or storage issue.

15. What the educator sees in each portal role

A director needs the center overview, accepted curriculum versions, staff completion, support requests, family communications, and release notices. A staff member needs assigned lessons, materials, adaptations, and the ability to record permitted observations. A cook needs the approved menu, ingredients, substitutions, and kitchen records. A family needs the take-home message and the resources intentionally shared with them. A tenant or partner must not see another center's children, observations, financial records, or private support tickets.

The companion assumes role boundaries are implemented elsewhere in the platform. It does not claim that a visual portal screen proves tenant isolation. Acceptance requires a cross-role test with synthetic records: director sees the center; teacher sees assigned room; family sees only their child-facing materials; unrelated tenant sees nothing; and a revoked account cannot continue to access private records. Sensitive or AI-assisted recommendations require a human review path.

16. Support conversation scripts

Director asks for a launch date

"Let's confirm the room, age group, staff owner, device or screen-free route, food lead, and first accepted lesson. I'll record the launch gate and the items still waiting for review. A draft unit can be used for internal preparation only until the release status says accepted."

Teacher says a child will not join

“Joining can mean watching, pointing, moving, using a picture, listening, or coming back later. Let’s identify the access barrier and choose one small alternative. We’ll record what was offered and what the child chose.”

Family asks whether a food is required

“The color conversation is an invitation. Your child is never pressured to taste. The center’s food lead will follow the child’s approved allergy and meal plan. We can offer a safe alternative or a non-food way to participate.”

Partner asks whether training is certified

“The Academy catalog is an internal draft training system. We can describe the modules and completion evidence. We will not call it state-approved certification or promise clock hours unless the relevant authority has approved that specific course.”

Director reports a portal concern

“Please identify the account role, center, record type, time, and action that was visible. Do not send a child’s private information in an unsecured message. We will preserve the support record, limit access while investigating, and document the resolution.”

17. Seasonal family activity cards

The seasonal source is strongest when it gives families a shared action instead of a themed worksheet. A few examples:

- **Back to School Welcome:** draw or point to one thing that helps a child feel ready; make a calm arrival card.
- **Fall Harvest:** compare a leaf, seed, or fruit by color and texture; use no food or outdoor item without adult review.
- **Winter Celebrations Around the World:** invite families to share a chosen light, song, or gathering tradition; never require a family to represent a culture.
- **Kindness and Fairness:** ask children what makes a turn feel fair; practice changing the rule so more children can enter.
- **Black History Month:** use age-appropriate stories of real people and community contributions; avoid reducing history to a craft or a single quote.
- **Spring and Earth Week:** sort reuse, recycle, and trash with local guidance; take a short observation walk.
- **Week of the Young Child:** let children choose a song, material, greeting, or family message.
- **Juneteenth:** use truthful, age-appropriate language about freedom and family, with reviewed materials and no costume framing.

- **Community celebration:** make a family route map, practice a welcome, and offer a quiet alternative to crowds or loud music.

Every card carries age route, materials, adult safety note, accessibility option, family choice, and status. The event title alone is not a curriculum.

18. Restoration source notes

The center curriculum source supplied a full year structure, age bands for 2s and 3-5s, daily planning forms, observation sheets, family engagement, standards alignment, inclusion, and health/safety chapters. Its older visual descriptions conflict with current character canon in places; this companion uses the current canon and preserves the teaching mechanics.

The storybook source supplied read-aloud and family-use logic. The current manifest controls which revised digital editions are live. A storybook source file, page image, or layout proof does not close a publication gate.

The cookbook source supplied 36 recipe-card concepts across three difficulty levels, four-week menus, shopping and prep guidance, child jobs, and rainbow language. Specific prices, reimbursement assumptions, and crediting require a current food review and are intentionally not treated as investor-ready facts.

The teacher-training source supplied a credential ladder, module catalog, role tracks, observation rubric, and state-approval aspirations. The current site identifies 37 internal Academy modules. The term “certified educator” is retained as historical source language only; current collateral must say internal training or draft Academy until approval exists.

The summer and holiday source supplied ten camp weeks, fourteen seasonal concepts, four family events, five-day structures, materials lists, and safety notes. Those are retained as add-on planning content. The current site manifest controls whether any unit is available to a partner, in what format, and with what acceptance evidence.

19. Final readiness checklist

Before calling this companion ready for partner delivery, the owner should confirm:

- current age bands and video rhythm match the site and contract;
- every lesson card has a current status and version;
- Unit 1 draft plans are not accepted until educator, safety, curriculum, language, and owner review are recorded;
- Units 1-11 are clearly marked draft until accepted;
- Unit 12 is labeled in writing until reviewed;
- Spanish resources identify draft versus native-reviewed status;
- all Academy modules are marked internal draft unless approval exists;

- meal cards have food-lead, allergy, choking, and crediting review;
- movement cards include adaptations and throughout-day use;
- seasonal content passes historical, cultural, accessibility, and safety review;
- portal roles and tenant boundaries are exercised with test records;
- family messages preserve consent and privacy;
- support scripts match the actual service agreement;
- manufactured materials and kits have a product-specific acceptance record;
- a director can identify who owns every open item and when it will be reviewed.

The companion earns trust when a teacher can use it on Monday, a director can inspect its status on Friday, and a family receives a clear bridge home without being promised a credential, a finished product, or a medical outcome that the evidence does not support.

20. Unit 1 four-week implementation sequence

The current release identifies Unit 1 as the teaching-plan priority. The sequence below turns the restored center-curriculum mechanics into a usable first month while keeping the current character and zone system. It is a planning bridge, not evidence that every page has passed final review.

Week 1: Booker makes room

Purpose: establish arrival, belonging, and the idea that a classroom can make room for every child. The adult watches for entry language, separation feelings, and children's ability to choose a first activity.

Materials: Booker storybook or approved digital edition, name cards, a small basket of welcome objects, blue paper, large crayons, a floor boundary, and a quiet-choice card. Avoid loose pieces that fit entirely inside a child's mouth. The welcome object is shown and handled with adult direction; it is not a required comfort item.

Monday: read the opening pages slowly, then let each child point, gesture, or say how they enter a room. The adult models, "You can come in. I will help you find a place." Twos receive two choices: draw or look at a book. Older children may describe a place where they feel comfortable. Record who separates easily, who needs a longer arrival, and what support worked.

Tuesday: make a paper "room" with open spaces. Children place their name card where they want to begin. Ask, "What could we add so a friend can join?" Do not require verbal answers. A point, move, or gesture counts. Send home one sentence asking families what helps with a new place.

Wednesday: use a short welcome song and a stop signal. Practice entering, pausing, looking, and choosing. Keep singing and video separate; the current screen rhythm is a short Mon-Thu option for children 3+ and is not a substitute for the live welcome.

Thursday: act out two versions of a welcome: crowded and spacious. The teacher narrates without shaming, "There is not enough room yet. We can move a little." Older children can suggest a solution. The

observation focus is flexible problem solving, not performance quality.

Friday: keep the day screen-free. Revisit the week's book, select a favorite welcome object, and create a family note: "This week we practiced making room. At home, ask your child to show a place where a friend can join." The teacher closes the week with one successful support and one next step.

Week 2: Lumi notices feelings

Purpose: connect facial expression, body cues, and respectful help. The objective is emotional vocabulary and co-regulation, not diagnosis.

Materials: Lumi pages, four feeling cards, a mirror used one child at a time, soft drawing materials, a calm-space marker, and a choice board. The teacher never tells a child what they feel; the card is an invitation to identify or reject a possibility.

Monday: read a scene in which Lumi notices a change. Offer "comfortable," "unsure," "sad," and "excited" as optional words. Twos can match a face or body pose; older children can give a reason or use a home-language word.

Tuesday: practice a three-step pause: stop, breathe, choose help. The breathing invitation is brief and optional. A child may choose water, a quiet seat, an adult, or a different activity. Record the child's chosen strategy rather than rating the child's mood.

Wednesday: make a class help menu. Children choose a picture for "sit near me," "give me space," "help me start," or "try again." The adult models asking before touching another person or taking a material.

Thursday: use puppet or picture-card dialogue. Lumi can say, "I need a little help." Children can answer with a gesture, a word, or by getting an adult. Keep the four classmates as printed puppets or picture cards until the physical-product safety gate is complete.

Friday: screen-free family bridge. Send a two-choice note: "When your child needs a pause, would they rather have space or company?" Use replies to adjust arrival and quiet-space supports.

Week 3: Zuri investigates

Purpose: build careful looking, question asking, and respect for a child's pace. Zuri's glasses and turtle identity are visual continuity cues; they are not a reason to stereotype how a child learns.

Materials: three safe natural objects too large to swallow, a tray, magnifiers used with an adult, picture labels, a "notice/wonder" card, and a drawing sheet. Check every object for sharp edges, loose parts, and allergy concerns.

Monday: invite children to notice color, shape, texture, or sound. Twos choose one attribute. Older children may make a prediction. The adult repeats the child's words accurately and does not turn every observation into a quiz.

Tuesday: sort objects one way, then change the rule. Ask, "What changed?" A child can move an object, point, or explain. Note persistence, flexibility, and whether the child sought help.

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

Wednesday: use a two-minute observation walk inside the approved area. Children look for one color or one shape. Staff maintain the line-of-sight plan and count children before, during, and after transition.

Thursday: make a “wonder wall” with drawings and dictated questions. Adults mark questions they can answer now and questions that require later investigation. This protects curiosity from false certainty.

Friday: screen-free review and family bridge: ask families to find one safe object at home and describe one thing they notice. No home collection is required; a drawing or conversation is enough.

Week 4: Bop moves and resets

Purpose: make movement, rest, and participation choices part of the learning day. Bop’s purple zone and green overalls remain consistent in classroom visuals.

Materials: floor markers, scarves or ribbons that cannot wrap around a child’s neck, a stop card, a water reminder, and seated alternatives. Inspect floor clearance and remove trip hazards before starting.

Monday: use three movement choices: reach, march, or seated tap. The adult demonstrates start and stop. A child may observe. The goal is safe participation, not matching the adult.

Tuesday: add a simple pathway with two turns. Twos use one marker at a time; older children may help describe direction. Staff watch spacing and modify the route for mobility, balance, sensory, or fatigue needs.

Wednesday: pair movement with a story beat: move when a character travels, pause when the character listens. Keep the pace low enough for children to hear one another.

Thursday: practice a reset: stop, water, breathe, choose the next activity. Adults model that rest is a normal part of movement. Do not use food, speed, or elimination as rewards.

Friday: hold a screen-free movement celebration with family choice. Children can show one movement, draw one movement, or simply watch. Record which adaptations made participation possible.

At the end of Unit 1, the director reviews four evidence types: lesson card used, observation note, family bridge sent, and safety closeout. A completed month is not a credential and does not prove developmental progress by itself.

21. Partner onboarding and first 30 days

A daycare, church, or small center should be able to understand the offer before it pays, identify the responsible adult, and see what will happen during the first month. The onboarding owner records each handoff in the tenant’s activity log.

Before activation: collect organization name, service address, director contact, billing contact, staff roster, age groups, operating days, languages requested, allergy procedures, emergency contacts, and the person authorized to accept materials. The intake form must explain that Futures Friends supplies educational programming and support; the provider retains responsibility for licensing, supervision, child records, medication, and emergency response.

Days 1-7: hold a 30-minute orientation, confirm portal roles, inspect the room or send a photo-based setup checklist, and select the Unit 1 start date. The director receives a one-page “first Monday” sheet with the current four-day video rhythm for 3+, Friday screen-free practice, printed-material inventory, and support contact. Staff complete the first internal training module and sign the material-safety acknowledgment.

Days 8-14: observe or review one arrival routine, one story read-aloud, one movement activity, and one family message. The coach gives two specific strengths and one next action. If the provider cannot share video or photos, use a live call, written checklist, or director attestation; do not imply that remote observation occurred.

Days 15-21: review lesson use, attendance or participation notes, material condition, allergy communication, and open support questions. Confirm that each staff member knows where to find the current version and how to report a mismatch. Any outdated PDF is removed from the local kit or marked superseded.

Days 22-30: conduct a director review. Ask what children used, what staff could not use, where families responded, and what requires adaptation. Close only the items with evidence: portal access tested, current files opened, safety checklist signed, and support owner assigned. “Onboarded” means these gates are complete; it does not mean the provider is accredited or that an enrollment result has been guaranteed.

Home daycares can use the same path with fewer staff: the owner is both director and educator, the family contact is explicit, and the material count is smaller. Church programs need a named weekday subject lead and a licensed-provider boundary. A Sunday part-day pilot remains a planning option until schedule, supervision, insurance, and acceptance details are approved.

22. Training evidence and escalation

The internal Academy should teach observable actions. Each module closes with an evidence item, a reviewer, and a correction path. A module may be complete for internal use while still remaining an unapproved draft in the public catalog.

Skill	Evidence	Reviewer	If evidence is missing
Read-aloud	adult uses a current book, pauses, and accepts nonverbal response	director or coach	repeat with a shorter page set
Movement	route is clear; seated option is offered; stop signal works	director	remove hazard and re-run before group use
Food activity	allergy list checked; handwashing and adult supervision recorded	food lead/director	stop tasting activity and replace with no-food version
Family message	message names the activity and a home choice without a claim of achievement	director	edit for plain language and consent
Portal use	staff opens current file and reports an issue through the correct path	support owner	retrain and confirm role access

Skill	Evidence	Reviewer	If evidence is missing
Inclusion	child has a genuine alternative way to participate	coach	revise materials and observe again

A safety concern is handled in order: stop the activity; supervise and separate the hazard; follow the provider's emergency or incident procedure; notify the director; document the facts; preserve the file or product batch; and notify the Futures Friends support owner. Do not investigate blame in front of children. A suspected allergy exposure, choking event, injury, or missing child follows the provider's established emergency process first. Futures Friends support cannot replace emergency services, licensing direction, or a medical professional.

A content concern follows a different path: mark the item "hold," identify the page or asset, state what conflicts, and continue only with an approved substitute. A portal concern records tenant, role, time, screen, and expected behavior. A billing concern records invoice and service period; it does not grant staff broader access. This separation keeps a small operational issue from becoming a child-safety or privacy failure.

23. Source map and restoration boundaries

The implementation details in Sections 1-19 draw primarily from 01_Center_Curriculum, especially its program overview, implementation, staffing, year plan, monthly and weekly units, templates, observation, family engagement, inclusion, standards, and health/safety sections (source pages 3, 9, 18, 23-32, 34-78, 79-105). The source's older character names, screen assumptions, and visual canon are not authoritative where they conflict with the current release manifest.

The storybook sequence and family bridge draw from 02_Storybook_Series, including its read-aloud, page-turn, prompt, and home-use sections. Revised editions remain subject to the current manifest's five digital editions and print-status gate.

The recipe, menu, kitchen-role, shopping, and tasting mechanics draw from 03_Eat_the_Rainbow_Cookbook, pages 6-12, 16-70, and 72-95. The source's pricing, cost, reimbursement, and crediting language is retained only as a review prompt. It is not a current financial representation.

The training ladder, module structure, observation rubric, delivery concepts, and launch checklist draw from 04_Teacher_Training_Certification, pages 3-18, 28-55, and 60-76. Claims of state approval, external certification, or recognized credentials are retired from current use. The current site's Academy count is 37 internal draft modules.

The ten summer weeks, seasonal concepts, family events, safety notes, inclusion guidance, and five-day structures draw from 07_Summer_Camp_and_Holiday_Units, pages 4-11, 11-46, and 49-91. Pricing and capacity figures are not carried forward without a current operating decision.

Omitted or retired detail register: obsolete character palettes and old zone names; old fixed production timing; external-certification claims; state-approval language; unverified reimbursement amounts; old enrollment guarantees; unsupported room-capacity promises; plush-product assumptions before safety testing; and any menu crediting statement not reviewed against the current meal standard. Those details

remain useful as historical source context but would mislead a partner if presented as current fact.

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

Partner operations & support

Working operating manual

Qualification, onboarding, portal roles, marketing, delivery, renewal and launch controls.

EVIDENCE KEY

Verified: source or test recorded. Configured: setup exists. Proposed: terms to agree. Planned: delivery or acceptance outstanding. Each claim carries its own status in the text.

LEARN | MOVE | EXPLORE | BELONG

Current working restoration 8 October 2026

Purpose. This manual turns the Program Library into a working operating system for a Futures Friends partner: a small home daycare, a larger center, a church child-care program, or a future multi-site operator. It is written for the team that must sell, onboard, support, renew, and improve the program. It is also a practical review instrument for investors: every promise below has an owner, an evidence requirement, and an acceptance gate.

Status discipline. This is a restored working manual, not a claim that every capability is live. The public demo is current as of release-manifest.js, version 2026-10-07.5, captured October 8, 2026. Six Hub feature families are locally tested with made-up data and publicly demonstrated; the Hub is not hosted in production; the store accepts requests; payment checkout is unconfigured; no paid traction is verified; and no accreditation or outcome claim is authorized. The words **proposed**, **ready to configure**, **demo**, and **verified** are intentional. Never turn a source-library proposal into customer-facing proof without completing the acceptance test in this document.

Operating promise. Futures Friends supplies a repeatable early-learning program: curriculum, physical classroom cues, nutrition support, training, family communication, marketing help, and an operating companion. A partner still owns its license, staffing, child supervision, legal compliance, tuition collection, and local relationships. Futures Friends supports the work and records the work; it does not replace licensed care, a center-management system, a lawyer, a CPA, a CACFP sponsor, or a state regulator.

1. How to use this manual

The director should be able to answer five questions every morning:

1. Which children and families need attention today?
2. What learning experience, meal, movement, and family communication are scheduled?
3. Which staff member owns each task, and what is overdue?
4. What evidence proves that the work happened?
5. Which issue must be escalated to Futures Friends, a regulator, a parent, or an emergency service?

The Futures Friends operator should be able to answer five questions every week:

1. Which partner is progressing through onboarding and which one is stuck?
2. Are welcome materials, staff training, and classroom zones delivered and accepted?
3. Are inquiries turning into tours, offers, enrollments, and active attendance?
4. Is the partner receiving the promised support within the agreed response target?
5. Is the account healthy enough to renew, expand, refer, or require a recovery plan?

Every record needs a **source**, **owner**, **status**, **next action**, **due date**, and **evidence link**. A screenshot of a preview is evidence of the preview only. A generated PDF is evidence of an export only. A saved record must be reopened after sign-out and, where applicable, from a second authorized role or device.

Status vocabulary

- **Proposed:** a design or operating idea awaiting owner approval, staffing, contract language, or implementation.
- **Ready to configure:** required fields, scripts, and acceptance criteria exist, but the live service has not been configured or exercised.
- **Demo:** visible in a public or internal preview with sample content. It must carry sample-data labeling.
- **Pilot:** used with an identified partner under a written scope, with manual fallback and a named reviewer.
- **Verified:** exercised at the claimed boundary: delivery, access, persistence, receipt, response, or financial settlement.
- **Retired:** removed from the active promise; retain the source note and reason.

Do not use “live,” “automated,” “secure,” “accredited,” “proven,” or “available to all partners” without a verification record.

2. Partner qualification and sales handoff

A partner is not qualified only because it likes the characters. The account must fit the program, have a responsible operator, and have a safe path to launch.

2.1 Qualification profile

Create one partner record before sending a proposal. Required fields:

- legal organization name and trading name;
- site address, time zone, and site type: home daycare, center, church, school, employer-sponsored, or other;
- owner and day-to-day director, with role and contact method;
- licensed capacity, enrolled capacity, age bands, current open seats, and anticipated opening date;
- licensing jurisdiction and license status; record the license number only in the restricted operations system;
- current curriculum and center-management tools;
- meal service and CACFP status, including sponsor or self-operated status;
- staff count, lead teacher count, cook/food lead, and administrative support;
- languages required by families and staff;
- current marketing sources and monthly inquiry volume;
- accessibility, sensory, faith, cultural, and classroom constraints;
- budget range and buying authority;
- desired package: home startup, starter, complete, custom, or pilot;
- reason for joining, urgent pain, success measure, and non-negotiable constraint;

- data-processing, photo, and media-release needs;
- decision date and next meeting.

A church partner needs additional fields: ministry owner, pastoral or board approval path, Sunday versus weekday use, background-check policy, shared-room storage, child-protection policy, and who controls the facility calendar. A home provider needs additional fields: household members, designated emergency contacts, available square footage, zoning/licensing constraints, and whether family members will see the same room.

2.2 Qualification call script

“Tell us about the children and families you serve, what is hardest to run consistently, and what you want to feel different 90 days from now. We will show you the program and the materials, then identify what remains your responsibility. We do not promise a license, enrollment increase, funding award, or child outcome without evidence. If the fit is right, we will give you a written launch scope with what arrives, who owns each step, and how support works.”

Ask in this order: **care model**, **current pain**, **capacity**, **staff readiness**, **family promise**, **budget**, **decision process**, **launch date**, **risk**. Listen for unsafe shortcuts: no responsible director, no supervision plan, refusal to follow licensing rules, desire to use the program as a medical or therapeutic guarantee, or demand for fabricated accreditation language. Those accounts require pause or decline.

2.3 Sales-to-operations handoff

A signed interest form is not a launch. The salesperson schedules a 30-minute handoff with the implementation owner and sends:

1. completed qualification profile;
2. quoted package and assumptions;
3. promised delivery items and exclusions;
4. decision-maker and day-to-day owner;
5. payment status or approved invoice terms;
6. target launch date and blackout dates;
7. licensing and facility constraints;
8. media and photo permissions;
9. language and accessibility needs;
10. risk register and unresolved questions.

The implementation owner returns a written **Go / Conditional Go / Hold / Decline** within two business days. Conditional Go means the missing item, owner, and deadline are explicit. No box ships and no public launch date is announced until the welcome order gate is passed.

2.4 Proposal acceptance checklist

The partner initials or digitally accepts each point:

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

- package, setup fee, recurring fee, taxes, shipping, and renewal terms are clear;
- what is physical, digital, live, planned, and partner-managed is clear;
- support channel, staffed hours, response target, and escalation path are clear;
- the partner remains responsible for licensing, staff, supervision, records, and parent agreements;
- no accreditation, guaranteed enrollment, guaranteed funding, or guaranteed child outcome is promised;
- photo, child data, and family communications require appropriate consent;
- cancellation, pause, lost/damaged items, and replacement rules are clear;
- any pilot limits and manual workarounds are written;
- launch evidence and acceptance date are agreed.

3. Welcome box and physical delivery operations

The Welcome Package and Catalog is the physical side of the program. The operational standard is that a director can open the shipment in order, identify every item, understand the first 30 days, and report a missing or unsafe item without searching through a large PDF.

3.1 Welcome box bill of materials

The exact BOM is versioned in the approved catalog. The fulfillment team must use the current BOM, not memory. A standard center box may include:

- director welcome letter and quick-start card;
- partner agreement summary and support card;
- classroom zone map and setup guide;
- starter curriculum index and first-week plans;
- character and classroom signage, subject to approved artwork;
- books or book list with edition and quantity;
- Eat the Rainbow cookbook or menu guide;
- staff training starter card and portal access instructions when available;
- family welcome templates and take-home materials;
- room safety and storage checklist;
- reorder card with item IDs and approved prices;
- packing slip with lot, version, packer initials, and QA initials.

Home and church editions must state what is intentionally omitted or resized. A church may receive portable storage, setup/tear-down instructions, and shared-space signage. A home provider may receive a smaller quantity and a room planner output. Never silently substitute a center item for a home item; record the substitution and obtain acceptance.

3.2 Order gates

Gate A - commercial authorization. Contract or approved purchase order exists, invoice terms are accepted, tax/shipping treatment is known, and the partner's delivery address is confirmed.

Gate B - content authorization. Every printed item points to an approved version. No draft artwork, unlicensed character, unapproved claim, or obsolete phone number enters the box.

Gate C - safety and quality. Count items, inspect print quality, verify age appropriateness, remove damaged or sharp items, and confirm that any food-contact, textile, toy, or furniture item has its required vendor and safety record. Plush or other child-contact items remain deferred until safety review is complete.

Gate D - pack verification. A second person checks the BOM against the packed carton. Photograph the closed carton, label, and packing slip; store the photo with the order ID.

Gate E - shipment proof. Record carrier, tracking, ship date, expected date, and delivery confirmation. A tracking number is not proof that the partner received or accepted the kit.

Gate F - partner acceptance. Within five business days, the director checks the contents, reports missing/damaged items, and confirms the first setup appointment. The implementation owner closes the delivery only after acceptance or a documented exception.

3.3 Unboxing and first 30 days

The director receives this sequence:

Day 0: open the quick-start envelope, photograph the packing slip, secure all child-accessible materials, and schedule a 30-minute kickoff.

Days 1-3: walk through the room, identify Reading, Calm, Discovery, Movement, and Eat the Rainbow areas, and note what cannot be installed due to space, safety, or faith/facility rules.

Days 4-7: orient all staff, choose one first-week learning loop, practice the family message, and identify one supply reorder trigger.

Week 2: run the first learning week, collect teacher observations, verify that family materials are understandable, and log any safety or accessibility adjustment.

Week 3: conduct a director review: staffing, room flow, meal workflow, attendance/records interface, family response, and support needs.

Week 4: submit the launch acceptance checklist and schedule a 30-day success review.

3.4 Missing or damaged item procedure

The director sends order ID, item ID, photo, quantity, and description through the support channel. The fulfillment owner classifies it as **safety**, **launch blocker**, **usable with replacement**, or **cosmetic**. Safety issues are removed from child access immediately and escalated the same business day. Launch blockers receive an ETA or approved substitute within one business day. A replacement is not closed until shipped and accepted.

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

3.5 Reorder controls

A reorder must show item ID, current approved price, quantity, partner, and intended use. Staff may not improvise a branded replacement from a marketplace listing. The catalog owner updates price, vendor, lead time, and version. If a product is unavailable, the substitution requires content and safety approval, then a catalog note.

4. Digital onboarding and portal roles

The Futures Hub plan defines a director, teacher, cook/food lead, home provider, family, Futures support, and owner/franchise administration. The role model must be tenant-scoped: an account can see only the organization and sites assigned to it, and a family can see only its own household and child records.

The public demos and source plan are not production proof. Until the Hub is hosted and exercised, use a controlled manual register for invitations, training completion, and support tickets.

4.1 Director workflow

The director is responsible for site setup, staff roster, room setup, curriculum calendar, family communication, compliance reminders, supply orders, and review of reports. On first access:

1. verify organization name, site, time zone, address, and license metadata;
2. invite staff with least privilege;
3. verify the staff roster against employment records;
4. set the first learning week and menu responsibility;
5. upload or link approved site policies;
6. confirm family communication language and consent status;
7. open the launch checklist and assign owners;
8. test sign-out, re-login, and mobile view;
9. document any data mismatch before adding children.

The director must not use a shared password. A director may see site-wide operational information, but sensitive child or staff data should be limited to the minimum necessary for the role and local law.

4.2 Teacher workflow

The teacher opens today’s lesson, episode or story, question, activity, room zone, and family extension. The teacher records completion and an observation using approved language. Observations are factual: what the child did, said, attempted, or needed. Do not enter diagnoses, labels, or speculative claims. If a child-safety concern appears, use the site’s mandated reporting and safeguarding procedure; do not rely on a curriculum note.

The teacher can view assigned children and relevant accommodations, but should not access unrelated family billing, staff HR, or other sites. A covering adult gets time-limited access or a printed pack.

4.3 Cook or food lead workflow

The food lead views the approved menu, attendance estimate, substitutions, allergy information, and meal record. The Hub may support CACFP preparation; it does not replace the sponsor's or state's official claim system until that integration is verified. Record substitutions and absences according to the sponsor's rules. Keep meal counts and child data restricted.

4.4 Family workflow

The family view should show the week's learning theme, take-home activity, menu or food note as appropriate, announcements, documents requiring acknowledgment, and a safe message route. It should not expose another family's child, staff notes, internal workflow, or partner finances. Family communications should be available in the agreed language and readable on a phone.

4.5 Academy/training workflow

Training is a record of completion, not proof of competence by itself. A course record contains learner, module version, assigned date, completion date, assessment or observed practice, trainer, and renewal date. The director sees site completion; the learner sees personal progress; Futures support sees only what is needed to administer the course. Certificates must not use accreditation language unless an authorized accreditor and scope are documented.

4.6 Futures support workflow

Support staff may troubleshoot configuration, content, orders, and account access. They must not browse unrelated tenant data. Support impersonation, if ever needed, must be time-limited, logged, and approved. A support agent should prefer a redacted screenshot or record ID over receiving a child's full medical or identity information.

4.7 Access acceptance test

For each role, create a test account in a non-production tenant or approved pilot:

- invite and activate;
- sign in from a phone and desktop;
- confirm only assigned site data appears;
- save a harmless test record;
- sign out and reload;
- verify persistence;
- attempt a forbidden record and confirm denial;
- reset password or complete MFA recovery;
- revoke access and confirm the session cannot continue;
- export or delete according to policy;
- record screenshots, timestamps, account IDs, and result.

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

A green UI is not a pass. The pass is the observed authorization and persistence behavior.

5. Tenant, data, backup, and privacy controls

Every partner account needs an organization ID and site ID. Every child, family, staff, curriculum completion, message, order, funding record, and support ticket must carry the organization scope. A director may have multiple sites only when explicitly assigned. Owner/franchise administration may aggregate metrics only under a documented purpose and permission model.

5.1 Data classification

Restricted child data: name, birth date, attendance, allergy, health, developmental observation, family contact, authorization, and incident information.

Restricted staff data: identity, background check, training record, employment status, and performance note.

Operational confidential: contract, pricing, funding application, vendor, internal support, and financial records.

Public program content: approved lesson descriptions, menus, character copy, public events, and published marketing.

Default to the most restrictive classification. Never put restricted data in a public demo, URL query string, shared screenshot, marketing case study, or AI prompt without an approved process.

5.2 Backup and recovery requirements

Before production, write the recovery plan:

- what is backed up and how often;
- retention period and deletion rule;
- where backups are encrypted;
- who can restore;
- how restore is tested;
- target recovery point and recovery time;
- how a partner receives an export on termination;
- how legal hold or incident preservation works.

A backup job is not proof of recoverability. Run a restoration drill with synthetic data, compare counts and permissions, and record the result. The owner signs the recovery test; support does not self-approve a failed restore.

5.3 Incident escalation

P0 - immediate child safety, active unauthorized access, or material data exposure: contain access, notify the executive/security owner immediately, preserve logs, contact emergency or regulatory channels as required, and do not improvise a public explanation.

P1 - launch-blocking outage, cross-tenant visibility, lost records, or payment error: acknowledge within the staffed target, assign an incident owner, isolate the affected workflow, provide a partner update, and produce a written resolution and prevention action.

P2 - major feature unavailable, repeated sync failure, or order delay: acknowledge within one business day, provide a workaround and next update.

P3 - question, content correction, minor cosmetic issue: acknowledge within two business days and place in the normal queue.

These are proposed service targets until staffing and contract terms are approved. Publish only the targets that can be staffed.

6. Support, customer success, and renewal

The monthly fee is valuable only if the partner can predict what happens after purchase. The support promise should state channels, staffed hours, response target, included help, training boundaries, emergency handling, and paid work. “Unlimited support” is not an operating policy.

6.1 Ticket fields

Every ticket contains: partner, site, requester role, category, severity, child-data flag, affected workflow, description, reproduction steps, attachment/redaction check, owner, next update due, resolution, partner confirmation, and knowledge-base link.

Categories: account/access, curriculum/content, classroom setup, family communication, funding evidence, food/CACFP, order/fulfillment, marketing, billing, data/privacy, and feature request.

6.2 First response and resolution targets

Proposed pilot targets:

- P0: immediate acknowledgement when staffed; live handoff to incident owner.
- P1: acknowledgement within four staffed hours; update daily until contained.
- P2: acknowledgement within one business day; target resolution within three business days or documented workaround.
- P3: acknowledgement within two business days; answer or plan within ten business days.
- Feature requests: acknowledge within five business days; no implied delivery date until roadmap approval.

A response is not a resolution. Close only when the partner confirms the workaround or the owner records two unanswered follow-ups and the closure policy permits it.

6.3 Monthly success review

The customer-success owner reviews launch completion, active staff, training, room readiness, curriculum usage, family communications, open tickets, order issues, enrollment funnel, and partner sentiment. The review produces three actions: keep, improve, or escalate. A partner with repeated missed launch gates receives a recovery plan before renewal outreach.

6.4 Renewal and expansion

At 90 days before renewal, confirm outcomes against the partner's stated success measures. At 60 days, propose renewal, site expansion, room add-on, additional training, or a pause plan. At 30 days, confirm billing and access. Never threaten data loss without a written retention and export policy.

Expansion triggers include a second site, increased classroom capacity, recurring reorder need, teacher cohort training, family engagement demand, or a church adding weekday care. Expansion requires a new scope and capacity check; it is not an automatic upsell.

6.5 Churn interview

Ask: what did you expect, what happened, what became easier, what remained hard, what was missing, what price or support change would matter, and may we quote your feedback? Code the reason: product fit, implementation, staffing, funding, price, support, facility closure, or external event. Feed patterns into the roadmap.

7. Enrollment and marketing funnel

The Enrollment Marketing Kit supplies a 90-day plan, landing-page copy, review prompts, social content, short-video ideas, ads, print materials, community partnerships, tours, follow-up, objection handling, and tracking. Use it as a campaign system, not as a pile of posts.

7.1 Funnel stages

1. **Reach:** a family or provider sees a post, sign, referral, search result, event, or partner mention.
2. **Inquiry:** contact information and need are captured with consent and source.
3. **Qualification:** age, schedule, location, start date, subsidy interest, and fit are confirmed.
4. **Tour or demo:** the family visits the center or the provider attends a program demo.
5. **Offer:** price, schedule, enrollment requirements, and next step are written.
6. **Decision:** family or provider accepts, declines, pauses, or enters waitlist.
7. **Enrollment/onboarding:** documents, deposit/payment, welcome, and first-day plan are complete.
8. **Activation:** the child attends or the partner runs its first week.
9. **Referral/renewal:** satisfied families and partners generate the next qualified inquiry.

Each stage needs a date, owner, source, next action, and reason for leaving. "No response" is not a useful reason unless the contact attempts are recorded.

7.2 Source tracking

Use one source vocabulary: Google Search, Google Business Profile, Meta, church bulletin, pediatrician/WIC referral, employer, partner referral, open house, yard sign, flyer, direct, or other. Use campaign codes on every landing page and printed QR code. Do not claim channel performance while analytics is empty; use a manual inquiry log during the pilot.

7.3 Family inquiry script

“Thanks for reaching out. What age is your child, when would you like care to begin, and what matters most to your family in choosing a program? I can tell you what we offer, what we still need from you, and whether a tour or waitlist is the right next step. We do not reserve a seat until the written enrollment requirements are complete.”

Confirm schedule, allergies or support needs without collecting unnecessary medical detail, transportation, language, subsidy status, and contact preference. Never promise a place, funding approval, or developmental result on the first call.

7.4 Twenty-minute tour

- Minutes 0-3: welcome, safety, schedule, and family priorities.
- Minutes 3-8: show a real classroom zone and explain what children do there.
- Minutes 8-12: explain daily rhythm, meals, family communication, and staff roles.
- Minutes 12-16: review enrollment requirements, tuition, subsidy documentation, and start dates.
- Minutes 16-18: answer objections with facts and a written follow-up.
- Minutes 18-20: agree to one next step and date.

The tour host logs attendance, questions, objection, next action, and whether a follow-up consent was given. Never photograph children during a tour without permission.

7.5 Day 0-14 follow-up

Day 0: send thanks, recap priorities, pricing/schedule, and one clear next step.

Day 2: answer the most important question and provide a relevant room or family resource.

Day 5: share an FAQ or funding explanation; invite a second conversation.

Day 8: offer a start-date or waitlist update.

Day 14: close the active follow-up, move to nurture with permission, or record declined reason.

For provider sales, substitute a one-page implementation scope, sample welcome box inventory, portal role map, and support plan.

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

7.6 Campaign acceptance

Before spending on ads, confirm landing page, form route, response owner, privacy notice, source code, creative approval, budget cap, and stop condition. A campaign cannot be called successful on clicks alone. Define the target as qualified inquiries, attended tours, accepted offers, active enrollments, or signed partner pilots.

8. Funding and eligibility evidence

The Funding Guide describes CACFP, Missouri subsidy, public pre-K/Head Start connections, grants, low-cost capital, tax benefits, and done-for-you support. It is a navigation aid, not a funding guarantee or legal opinion. Rates, waitlists, deadlines, and eligibility change; the operator must verify current rules with the administering agency before advising a partner.

8.1 Funding intake

Ask only what is needed to route the partner:

- program type, license, capacity, and location;
- nonprofit/for-profit status;
- current CACFP sponsor or application status;
- subsidy-provider status and attendance process;
- proportion of children likely to meet eligibility rules, without storing unnecessary family data;
- meals served, menu process, and recordkeeping capacity;
- grant purpose, deadline, match requirement, and reporting burden;
- desired help: eligibility scan, document checklist, narrative review, budget model, or submission support.

Record source, date checked, agency link, responsible verifier, and expiration/recheck date. Do not copy a rate into a quote without its effective period.

8.2 CACFP operating checklist

1. Identify sponsor or self-operated pathway.
2. Confirm license and eligibility status.
3. Confirm meal service, attendance, menu, and production records.
4. Verify the applicable income or subsidy threshold rules, including any for-profit participation condition.
5. Set a monthly reconciliation owner.
6. Keep source records for the sponsor’s required retention period.
7. Reconcile served meals, attendance, substitutions, and claim totals.
8. Escalate discrepancies before submission.

The Hub may help prepare records, but a claim is not accepted merely because a dashboard shows a number. The official submission, sponsor acknowledgement, and payout record are the proof boundary.

8.3 Subsidy workflow

The partner provides families with the current agency application path and documents. The center confirms attendance and billing records according to the agency's rules. Because waitlists and payment mechanics can change, state the current uncertainty plainly. Never tell a family that a subsidy will be approved or paid on enrollment unless the agency confirms it.

8.4 Grant workflow

Use a grant register with funder, program, fit, deadline, amount, match, narrative owner, budget owner, attachments, submission date, confirmation number, decision date, reporting requirements, and renewal date. A submitted application is not an award. A press release is not a payment. Retain the award letter, executed agreement, reimbursement request, and payment receipt.

8.5 Parent and employer tax information

Tax-benefit pages can help a family or employer ask its advisor better questions. Futures Friends should provide plain-language prompts and current agency links, then state that the partner or family must obtain tax advice. No tax savings should appear as guaranteed revenue in the partner ROI model.

9. Launch phases and acceptance checklists

Phase 0 - readiness, before selling a pilot

Owner: executive/operations. **Exit:** a written scope and manual fallback exist.

- package and pricing approved;
- current public demo inventory reviewed;
- support channel and staffed owner named;
- welcome BOM and vendor status checked;
- contract, privacy, media, and cancellation language approved;
- no prohibited claims in landing pages or sales deck;
- intake and payment status described honestly;
- pilot partner selected and success measures written.

Phase 1 - partner setup

Owner: implementation lead. **Exit:** site, staff, room, and communication plan accepted.

- qualification profile complete;
- responsible director identified;
- license and facility constraints documented;

- welcome order gate passed;
- room plan accepted;
- staff roster and training plan complete;
- family communication language selected;
- support escalation contacts confirmed;
- baseline enrollment and operational metrics captured.

Phase 2 - first week

Owner: director, supported by implementation. **Exit:** first learning loop and family communication completed.

- staff orientation complete;
- first lesson/episode and activity delivered;
- room zones safe and usable;
- food/menu workflow reviewed;
- family message sent through the approved route;
- issues logged with owners and due dates;
- substitute/manual fallback available.

Phase 3 - thirty-day review

Owner: customer success. **Exit:** continue, remediate, or pause decision.

- partner reports against success measures;
- staff training status reviewed;
- family response sampled appropriately;
- open support tickets reviewed;
- order/reorder issues closed or planned;
- enrollment funnel reviewed;
- funding route and evidence gaps reviewed;
- 60-day plan agreed.

Phase 4 - production readiness

Owner: product/engineering plus operations. **Exit:** a live feature may enter the paid promise.

- authentication and role access exercised;
- tenant isolation tested;
- save/reload persistence proven;
- backup/restore tested;

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

- monitoring and incident response tested;
- analytics events received;
- billing or invoice path settled and reconciled;
- support runbook staffed;
- accessibility and mobile checks completed;
- public copy changed from demo/planned only after evidence review.

10. Asset production register

The Website Asset List is a source inventory, not a completion certificate. Each asset needs a production record with ID, purpose, audience, format, owner, source file, approved copy, dimensions, accessibility text, rights status, version, placement, QA, and retirement date.

10.1 Required asset classes

Brand: wordmarks, shield, character marks, color and type rules, partner lockups, favicon, social avatar, and print-safe files.

Sales: partner overview, package comparison, pricing sheet, one-page ROI explainer, welcome box photography, room-zone diagram, demo video, FAQ, proposal template, and terms summary.

Enrollment: family landing page, tour invitation, open-house kit, flyer, door hanger, yard sign, postcard, referral card, review request, ad variants, and bilingual versions where needed.

Operations: quick-start guide, room setup, first-week lesson, staff training cards, family welcome, safety checklist, reorder card, support card, funding checklist, incident escalation card, and absence-coverage pack.

Portal: role-specific onboarding, empty-state copy, sample-data labels, accessibility instructions, password/MFA recovery, export request, support link, and release notes.

Video: 15-second family hook, 30-second partner hook, room setup demonstration, director walkthrough, teacher activity demonstration, family take-home demonstration, and captioned Spanish or other approved language versions.

10.2 Production gate

Brief → script/copy approval → rights check → production → technical export → accessibility review → rendered review at target breakpoint/device → owner acceptance → placement → live inspection → archive source and proof. A storyboard, generation prompt, or edit timeline is not a final asset.

10.3 Retirements

Retire assets when a price, phone number, URL, role, claim, character design, product, or legal term changes. Mark the old version retired, remove public placements, update printed inventory, and record whether existing partners need a replacement. Do not silently overwrite a file that a partner may still be using.

11. Governance, weekly cadence, and reporting

Daily site huddle

The director reviews attendance, staffing, safety, meals, today's learning loop, family messages, and urgent support. Five minutes is enough if the board shows owner and next action.

Weekly partner review

The implementation or success owner reviews launch gates, tickets, training, delivery, enrollment, funding, and next week's commitments. Every unresolved issue has a next update date.

Weekly internal operating review

Owners review: new inquiries, qualified inquiries, tours, offers, enrollments, active partners, onboarding cycle time, box defects, support response, unresolved P0/P1 incidents, content approvals, and cash/receivables. Separate actuals from targets and planning assumptions.

Monthly executive review

Review recurring revenue only from signed, active, paid accounts; churn; gross margin; fulfillment cost; support load; partner health; campaign cost per qualified result; funding submissions and awards; roadmap evidence; and claims/complaints. Do not count a proposal, demo signup, unpaid invoice, or sample dashboard as traction.

Record of decision template

- Decision date:
- Decision owner:
- Question:
- Options considered:
- Selected option and why:
- Constraints:
- Evidence reviewed:
- Customer or child impact:
- Cost and staffing impact:
- Review date:
- Reversal trigger:

12. Templates

Partner launch brief

Partner: Site(s): Program type: Director: Target first day: Age bands/capacity: Primary success measure: Package and price: Included physical items: Included digital items: Partner responsibilities: Futures Friends responsibilities: Support channel/hours: Known risks: Open decisions and owners: Acceptance date:

Support escalation note

Ticket ID: Severity: Partner/site: Affected role/workflow: Child or restricted data involved? What happened: When it started: Current containment: Owner: Next update due: Partner message: Resolution evidence: Prevention action:

Monthly partner health score

Score each 0, 1, or 2 and explain the evidence:

- launch completion;
- active staff/training;
- classroom use;
- family communication;
- support responsiveness;
- order/supply health;
- enrollment or partner lead flow;
- funding readiness;
- payment status;
- relationship confidence.

0 means blocked or unknown, 1 means partial or at risk, 2 means current and evidenced. A low score triggers a recovery plan; it does not automatically trigger a sales pitch.

Quote/demo follow-up

“Thank you for reviewing Futures Friends. Based on your [home/center/church] setup, we recommend [scope]. The attached plan shows what arrives, what your team owns, what support is included, and what remains planned. Online checkout and Hub access are not being represented as active until they are configured. Our next step is [meeting/date]. Reply with the room dimensions, launch date, and decision-maker so we can confirm the scope.”

Family welcome message

“Welcome to [site]. This week we are exploring [theme] through reading, movement, discovery, belonging, and play. Your child may bring home [activity]. Please review [policy/document] and contact [role/channel] with questions. The program records learning observations and care information for the people who need it; we do not publish your child’s information without the appropriate permission.”

13. Current truth, source map, and omissions

Current public truth

As of release-manifest.js, version 2026-10-07.5, captured October 8, 2026, the public site is a demonstration and sales surface. Room-kit and room-planner work improve the product story. Six Futures Hub feature families are locally tested with made-up data; production deployment remains outstanding. The store accepts requests; payment checkout is unconfigured. No paid traction has been verified in this manual. No accreditation claims are authorized. Any public sample dashboard, sample children, planned CACFP figures, or preview portal must be labeled at the point of use.

Restoration source map

- **Volume 5 - Welcome Package and Catalog:** physical welcome box, letters, first 30 days, family kit, price/catalog logic, samples, safety, storage, fulfillment, and reordering.
- **Volume 6 - Enrollment Marketing Kit:** 90-day enrollment plan, budgets, partner brand rules, photo/media release, listings/reviews, landing page, SEO, social, content calendar, video hooks, ads, print, partnerships, open house, inquiry-to-enrollment, follow-up, objections, and reporting.
- **Volume 8 - Funding Guide:** money map, CACFP, Missouri subsidy, public programs, grants, tax benefits, grant writing, Hub assistance, done-for-you support, checklist, FAQ, and glossary.
- **Volume 9 - Futures Hub Platform Plan:** roles, dashboard, curriculum, menus, CACFP, training, store, family, marketing, funding, staffing, admin, data model, integrations, security, accessibility, roadmap, pricing, metrics, and risks.
- **Volume 10 - Launch Plan:** market targeting, marketing budget, enrollment budget, content/production, SEO, creative hires, legal/IP, domains/accounts, accountability tracker, budget roll-up, and risk mitigation.
- **Volume 11 - Website Gap Analysis:** missing platform and public-site workflows, including CRM, family accounts, attendance, safety, HR, compliance, curriculum, food program, messaging, documents, store, funding, analytics, multi-site administration, and risk handling.
- **Volume 12 - Website Asset List:** asset IDs and production inventory. It is intentionally treated as a register requiring acceptance evidence, not copied as a promise list.

Deliberate omissions or retirements

This restoration does not reproduce the entire asset-list generation prompt library, because prompts are production inputs rather than operating procedures. It does not authorize every listed asset as finished. It does not claim that planned native apps, integrations, billing, attendance, payroll, check-in/out, family photo feeds, accreditation, grants, subsidy, or CACFP outcomes are live. It does not substitute the public demo for a tenant-scoped production Hub. It does not include a payment link or instruct staff to collect child data through an unverified form.

Items marked **CONFIRM** in the source volumes remain pending owner verification. Every price, rate, deadline, legal statement, vendor, rights status, and regulatory claim must be rechecked at the time it is published or used in a customer decision.

Release gate for customer-facing claims

Before a claim moves from “planned” to “available,” the owner attaches:

1. current source or configuration;
2. test account or sample order where safe;
3. rendered or delivered output;
4. role and tenant access evidence;
5. persistence/recovery evidence where applicable;
6. support owner and escalation path;
7. contract and public-copy review;
8. date, version, and reviewer.

The manual is complete enough to run a controlled pilot when these gates are staffed and documented. It is not permission to imply that the public demo already provides those services.

14. Detailed operating procedures by partner type

14.1 Home daycare launch

A home provider has less floor space, fewer staff, and less separation between business and household. The implementation owner conducts a remote or in-person setup review using a simple room sketch. Mark entry, exits, sleep, diapering/toileting, food preparation, storage, quiet space, movement space, and emergency equipment. The room planner can suggest a layout, but the provider and licensing authority decide whether it is acceptable.

The provider names a primary operator and an emergency backup. The first-week plan must work if a family member is present, a child arrives late, or weather prevents an outdoor activity. Materials are stored where children cannot access unsafe items and where the provider can account for every piece. A home partner receives a smaller reorder threshold and a shorter daily setup routine: pull the book, activity, character cue, and take-home item before opening; return and count materials after closing.

Home-provider family communication is direct and personal. Use a weekly digest rather than a high-volume message stream. The provider records a short observation for each child according to policy and keeps sensitive information in the restricted record. A family request for medical, developmental, or behavioral advice is routed to the appropriate professional or agency. Futures Friends supplies educational content and communication templates, not clinical guidance.

The 30-day review asks whether the program fits the household's actual rhythm. If the provider cannot maintain safe separation, records, or supervision, pause expansion and create a remediation plan. Do not sell a second room kit before the first setup is stable.

14.2 Center launch

A center launch is a site project, not a package delivery. The director appoints a launch lead and one representative for each workstream: classroom, food, family communication, training, supplies, and records. The launch lead holds a weekly 20-minute check-in until the first 30-day review.

Before staff orientation, map each room to age band, lead teacher, assistant, capacity, and zone plan. Match the first week's activities to staff skill and available materials. A director may choose fewer activities and execute them well; the quality standard is repeatable delivery with evidence, not maximum content volume.

The center keeps an absence-coverage plan: the floater, owner-director and head of administration cover absences (no paid substitutes). Its pack holds the day's lesson summary, safe activity, transition language, record steps and escalation contacts, printed or stored securely in case a login fails.

At week two, the director conducts a walk-through using the same checklist as the implementation owner. Differences are logged as site-specific adaptations, not silent drift. If a classroom changes the activity for a child's accessibility need, record the adaptation and why it worked.

14.3 Church or shared-space launch

The church partner identifies who controls the facility, who supervises children, who holds records, and how weekday care differs from Sunday ministry. Futures Friends does not assume that a church's existing volunteer process equals a licensed-care staffing process. Confirm background checks, ratios, emergency contacts, allergies, custody instructions, room access, and storage.

Use portable zones with an opening and closing checklist. The setup lead photographs the room before children arrive only if the image contains no children or restricted documents. At close, count materials, remove food, secure records, and document damage. A shared room needs a lost-item route and a calendar conflict route.

Church messaging should respect the partner's faith identity without implying that Futures Friends endorses a specific theology or that spiritual participation is a condition of care unless the partner's lawful policy clearly states it. The program's educational claims remain the same: stories, movement, discovery, nutrition, belonging, and play.

HISTORICAL REFERENCE | Current controls at front supersede financial, scope and readiness assumptions.

14.4 Multi-site or franchise-style launch

A multi-site operator appoints a central administrator and a site director for each location. Central staff can approve templates, compare aggregate metrics, and manage shared vendors. Site directors retain responsibility for local staff, family records, safety, and daily delivery. A central dashboard must not become an excuse for cross-site child visibility.

Use a site readiness matrix with one row per location and columns for contract, license, room plan, kit, staff, training, launch, support, and review. A new site cannot inherit “complete” status from another site. Each site has its own acceptance date and evidence.

15. Billing, collections, and financial controls

The current store is configured for requests, with payment checkout unconfigured. When billing is activated, operations must treat payment as a controlled workflow, not a button on a pricing page.

15.1 Billing setup checklist

Before publishing a payment option, confirm:

- legal seller and remittance address;
- tax treatment and invoice fields;
- product, setup, shipping, subscription, and add-on IDs;
- trial, proration, pause, cancellation, and refund rules;
- payment processor account and webhook verification;
- failed-payment handling and access grace period;
- who may change price or discount;
- invoice recipient and purchase-order process;
- reconciliation owner and month-end report;
- data retention and export;
- public terms and privacy copy.

The implementation owner must be able to trace: quote → order → invoice/payment → fulfillment → active service → renewal. A payment receipt without an activated service record is incomplete. An activated service record without a paid or approved invoice is an accounts-receivable risk.

15.2 Manual invoice fallback

During a pilot, use a numbered invoice register with partner, scope, due date, amount, status, receipt, and approver. Mark “paid,” “approved for invoice,” “past due,” “disputed,” or “refunded.” Do not call a manual bank transfer an online checkout. The public page should say how to request an invoice and who responds.

15.3 Access and nonpayment

A partner in a billing dispute should not lose access to safety-critical records without review. Define a grace period and a restricted-access state. Export or transition records according to contract. Never delete a tenant to solve an unpaid invoice.

15.4 Revenue reporting

Report signed recurring revenue, collected cash, outstanding invoices, refunds, credits, churned recurring revenue, and one-time product revenue separately. Do not count free pilots, proposals, uncollected invoices, or projected pipeline as paid traction.

16. Quality assurance for support and content

The support team and content team share one defect taxonomy. A wrong phone number on a flyer, an outdated price in a PDF, an inaccessible family message, a broken portal link, and a missing box item all affect trust, but they need different owners.

16.1 Defect classification

- **Safety-critical:** could expose a child to harm or cause unsafe care; remove from use and escalate immediately.
- **Privacy/security:** could disclose restricted data or grant unauthorized access; contain and escalate immediately.
- **Financial/legal:** wrong charge, contract, tax, rights, or regulatory statement; stop publication or collection until reviewed.
- **Launch blocker:** partner cannot start the promised workflow; provide manual fallback and recovery date.
- **Material usability:** partner can continue but with meaningful friction; prioritize in the next service window.
- **Cosmetic:** minor appearance or copy defect with no operational effect.

16.2 Content review card

Every public or partner-facing content item receives review for audience, promise, factual source, age appropriateness, language, accessibility, rights, contact path, and expiration. A reviewer initials the card and records the version. If a claim depends on a government program, the source and checked date appear in the internal register.

16.3 Sample-data review

Preview portals must show a banner and local labels such as “Demo record,” “Sample child,” or “Planned metric.” The review checks every table, card, chart, export, empty state, and email preview. A general disclaimer at the bottom of a page is insufficient if a user can screenshot a single metric and mistake it for live performance.

17. Practical leadership scripts and escalation language

Explaining the current public demo

“What you are seeing is a working demonstration of the intended experience. It shows the information architecture and sample workflows. The production Hub, authenticated records, billing, and automated intake are separate go-live gates. We will give you a written scope that distinguishes what you can use now, what we operate manually during the pilot, and what is still in development.”

Explaining a delayed feature

“We have not activated that workflow yet, so we are not representing it as available. Your immediate option is [manual process]. The owner is [name], the next update is [date], and the acceptance test is [specific evidence]. We will not ask you to enter sensitive data into an unverified route.”

Escalating a family concern to a director

“I’m documenting the family’s question and routing it to the site director because it concerns care decisions and the child’s record. Futures Friends can provide the program context and communication template; the licensed site team must make the care decision. We will confirm who owns the next response and by when.”

Declining an unsafe request

“We cannot approve that change because it would conflict with the site’s safety, privacy, licensing, or rights requirements. We can propose [safe alternative] and record the decision. If the requirement comes from your regulator or insurer, please provide the current written guidance so the implementation owner can review it.”

18. Pilot scorecard and evidence packet

At the end of a pilot, assemble one evidence packet rather than a collection of enthusiastic messages. Include:

- signed scope and acceptance criteria;
- partner qualification and risk record;
- welcome box BOM, shipment, acceptance, and defects;
- room setup and first-week checklist;
- staff orientation and training records;
- sample approved curriculum and family message;
- support ticket log with response times;
- enrollment or partner pipeline baseline and results;
- funding routing record, with no guarantee implied;

- payment/invoice reconciliation if charged;
- partner interview and satisfaction record;
- open issues and next release decision;
- photos or media only with documented permission;
- product, content, and legal sign-offs.

The pilot review asks three separate questions:

1. Did the partner receive the promised materials and support?
2. Did the partner use the program safely and consistently?
3. Did the operating model produce a repeatable result worth scaling?

A “yes” to the first question does not prove the second. A “yes” to the second does not prove enrollment or financial impact. Keep those claims separate.

Pilot exit decisions

Scale: evidence meets the agreed standard, support load is manageable, and the partner requests continuation.

Scale with conditions: core value is proven, but one named issue needs a deadline and owner.

Extend pilot: useful signal exists but evidence is incomplete or seasonal.

Pause: partner or Futures Friends cannot staff the work safely or meet the scope.

Close: no fit, unresolved risk, or no viable economics. Preserve the export and closeout message.

19. Roadmap-to-promise discipline

The platform plan includes a broad future product: curriculum, menus, CACFP, training, family, marketing, funding, staffing, administration, integrations, and analytics. A broad roadmap can help investors understand the opportunity, but it can also make a buyer assume that every box is already included. The commercial promise should therefore be narrower than the vision until each module passes the release gate.

For every roadmap item, keep a one-line record:

- problem solved;
- intended user;
- data handled;
- current status;
- manual fallback;
- dependency;
- owner;

- target pilot;
- acceptance test;
- public claim allowed.

Example: **Family weekly digest** - problem: families cannot see the learning extension; user: parent/guardian; data: approved curriculum and child-specific message only; status: manual template/pilot; fallback: printed note; dependency: consent and messaging route; owner: family experience; acceptance: message delivered to authorized household and archived; claim allowed: “template and pilot communication support,” not “automated family portal.”

This discipline protects the brand. A smaller promise delivered consistently is more valuable than a larger promise that requires the director to improvise.

20. Final owner checklist

Before a partner is described as active, the owner can answer yes to all applicable questions:

- Is the partner contract or scope accepted?
- Is the responsible director named?
- Is the licensing and facility boundary recorded?
- Is the welcome BOM current and accepted?
- Are safety and rights checks complete?
- Is the first 30-day plan assigned?
- Are staff roles and training records present?
- Are family consent and communication rules clear?
- Are portal permissions tested, or is a manual fallback documented?
- Are restricted records tenant-scoped and backed up according to the current capability?
- Is support staffed at the published level?
- Is billing/invoice status accurate?
- Is the enrollment/funnel source recorded?
- Are funding statements current and qualified?
- Are sample data and planned features labeled?
- Is the evidence packet location recorded?
- Does the partner know the next review date?

If any answer is “unknown,” the account is **conditional**, not active. If any answer is “unsafe,” pause the workflow and escalate. If a capability is only visible in the public demo, call it a demo. This is the standard that lets Futures Friends grow from a compelling brand into a dependable operating service.

Merchandise design exhibit

54 supplied design pages

The full supplied catalog follows. These are design concepts, with production, safety, pricing, rights and fulfillment review still required.

EVIDENCE KEY

Verified: source or test recorded. Configured: setup exists. Proposed: terms to agree. Planned: delivery or acceptance outstanding. Each claim carries its own status in the text.

LEARN

MOVE

EXPLORE

BELONG

How to read the design exhibit

The following 54 pages reproduce the supplied merchandise design catalog in full. It begins with a product sheet, not an obsolete investor cover. The archive preserves its original page numbering and layout.

Design evidence does not establish inventory, supplier orders, safety testing, live checkout or sales. Plush remains deferred pending product-safety testing. Current canon and commercial rules take precedence over old catalog language. Candidate art must pass continuity and rights review before prepress.
