01 / INVESTMENT DECISION

One center. A wider learning business.

Futures Friends connects the classroom, the family and a character-led learning world. The cost model now covers the business needed to deliver that promise, rather than a website alone.

Full-scope first-year cash model: $3,123,207.86.
The previously proposed $1.5 million loan leaves a gross gap of **$1,623,207.86** before verified receipts, available capital, scope changes and debt costs. This is a planning comparison, not a new approved funding request.

What is being built

A single pilot center serving ages 2–5; a secure parent, staff and child platform with CRM, ATS, store and curriculum records; reviewed bilingual learning materials; a 12-episode, seven-minute animated season; QR routine messages; and branded merchandise and a 50-device tablet pilot.

The financial plan has changed

The $140,000, $240,000 and $500,000 packages, their use-of-funds allocations and their repayment coverage are historical. They do not fund the present scope. The $1.5 million figure remains a proposed financing amount until the funded phase, draw schedule and repayment capacity are reconciled.

The investor decision

Choose between a larger supported financing requirement and a smaller, costed release of the plan. Neither choice should be presented as settled until supplier scopes, actual center economics and a monthly cash forecast support it. Permanent ownership, equity conversion and perpetual revenue participation are excluded.

Financial basis: 686 priced rows and 48 source records, checked in the cost model on October 10, 2026. Of those rows, 554 are planning allowances. A complete row count does not mean every price is a vendor quote.

02 / CASH REQUIREMENT

What the money actually covers.

The three scenarios price the combined center, platform, content, marketing and product operation. They are cost sensitivities, not promised investment returns.

Cash category	Low	Base	High
One-time development / launch	$1,041,702.01	$1,331,255.33	$1,812,560.96
Year-one recurring operations	$1,118,444.09	$1,266,942.18	$1,477,610.07
Opening inventory	$21,527.50	$24,509.50	$28,237.00
Refundable deposits	$7,200.00	$9,000.00	$11,250.00
Cash reserves	$415,839.76	$491,500.85	$610,243.12
GROSS YEAR-ONE CASH	$2,604,713.36	$3,123,207.86	$3,939,901.15

Base recurring run rate: $105,578.52 per month, calculated as annual recurring expense divided by 12. Spending, hiring and cash collections will not occur evenly through the year.

A second view of the same total

The base model includes staff $842,640.08; platform completion $441,000.00; content production $525,782.00; marketing and sales $186,770.00; daycare operations $300,391.99; merchandise $12,320.00; other business facets $316,097.27; technology $3,840.48; taxes $5,865.19; and reserves $488,500.85. These categories total $3,123,207.86. The extra $3,000 recall reserve is inside other business facets, bringing cash reserves in the table to $491,500.85.

Do not add these two views together. Reserves and refundable deposits are cash requirements, not ordinary operating expenses. Building purchase, major renovation, transport, historical creator backpay and loan fees, interest and principal are excluded.

03 / BUSINESS ARCHITECTURE

Show where each dollar earns.

The local pilot proves delivery. Provider subscriptions extend the system. Content and products make the characters part of everyday routines.

Business segment	Revenue to model	Costs and proof needed
Local daycare	Collected tuition; permitted fees and reimbursements	Actual enrollment, age mix, staff shifts, rent, meals and occupancy costs. Confirm licensed capacity.
Provider platform	Paid daycare / church subscriptions; onboarding; training and support	Hosting, account support, implementation and acquisition costs. Count only signed and paid accounts as secured income.
Content and products	Books, learning-zone kits, apparel, tablets, licensing and other paid products	Production, rights, inventory, fulfillment, returns, warranty, payment fees and marketing. Rights and margins need proof.

Keep a consolidated cash plan and separate segment results

Assign each cost row to the center, platform or content/products. Allocate shared administration, marketing and creator work once using documented time or another consistent driver. Track product margin and subscription contribution before using either to support repayment. The current cost workbook is detailed; this segment allocation is still to be completed.

Pricing must change with the delivery promise

The earlier provider packages should be treated as provisional until support load, onboarding hours, licensing and security costs are measured. For each offer, calculate direct delivery cost per customer, include its share of overhead, and then price for a stated margin. A price floor equals fully allocated cost divided by one minus the target margin; taxes and payment fees require their own treatment.

Merchandise sales, tablet purchases and deposits are different kinds of receipts. Refundable deposits are liabilities; rental cash has device purchase and replacement costs; store revenue must be reduced by fulfillment, returns and taxes. Revenue alone is not cash available for debt service.

04 / EXECUTION

Fund accepted milestones.

A smaller first release can make sense. It needs its own row-level budget before anyone says $1.5 million will cover it.

Release	Delivery and acceptance gate	Funding treatment
Confirm the pilot	License / capacity, lease, staffing coverage, actual receipts; signed supplier scopes and ownership agreements	Reconcile actual costs and decide which existing costs replace allowances.
Make the platform operational	Hosted staging and production; tested role isolation, consent, backups / restore, independent security review; reviewed bilingual content	Price remaining work after source inspection. Pay against accepted deliverables.
Prove family and center use	One-center onboarding; parent and adult-mediated child flows; progress records, QR routines, finite character messages	Measure adoption, support hours, retention and actual unit costs before scaling.
Release content and products	Season production by approved episodes; rights, translation / captions; tested tablet pilot and compliant merchandise	Commit in batches. Production and inventory expansion follow acceptance and demand.
Expand to other providers	Paid daycare / church pilots; repeatable onboarding and support; documented contribution margin	Forecast future sites separately. Their receipts are not guaranteed repayment funds.

One schedule for delivery, cash and reporting

Prepare a 13-week cash forecast, a monthly 12-month hiring / spending / collections plan, and a five-year income, balance-sheet and cash-flow projection. Align every draw with accepted scope. Record who signs off on education, nutrition, child privacy, security and Spanish content. Do not describe professional reviews as accreditation.

Avoid paying twice for staff and outside suppliers covering the same work. The broad model can contain overlapping scope until each work package has an owner, contract and acceptance standard.

05 / REPAYMENT

Return has to come from cash.

A loan payment can be calculated today. The business's ability to make that payment still needs an updated revenue and expense forecast.

Illustration only	Proposed $1.5 million principal
Interest / structure	9% nominal annual interest; no equity or conversion
Months 1–12	Interest only: $11,250.00 per month
Months 13–72	60 amortizing payments: $31,137.53 per month
Total paid to lender	$2,003,251.97
Principal / interest	$1,500,000.00 principal + $503,251.97 interest

Assumes the full principal is funded at closing, interest paid monthly, no fees, no missed payments and no prepayment. Calculations use unrounded payments; a signed agreement would set cent rounding and the final installment. The $503,251.97 interest is about 33.55% of principal over six years, not a 33.55% annual return.

What this adds to the cost model

A fully drawn first year adds $135,000.00 interest to the base cash model: **$3,258,207.86** before financing fees. Staged draws, different rates or a different grace period change the result. Do not add this illustration to a model that already includes the same debt costs.

Coverage must be rebuilt

An illustrative 1.25-times coverage target requires about **$38,921.92 per month** of cash available for debt service during amortization. This is a planning cushion, not an approved lender covenant. The old center / partner coverage figures used lower expenses and cannot establish coverage here.

Test slower enrollment, tuition collection losses, delayed partner launches, staff absence and overtime, product returns, cost overruns and production delays. A repayment promise should be based on cash after operating costs, taxes and essential reinvestment, with a clear reserve policy. No current evidence proves the proposed debt is serviceable.

06 / VALUE AND COMPENSATION

Recognize the work. Keep the claims separate.

The platform, brand and characters have real work behind them. The plan should show that work without confusing development value with money needed next year.

Category	What belongs in the investor plan
Work already created	Verified inventory of source code, CRM, ATS, store, portals, curriculum, brand / characters, artwork and rights. Note working, draft and unfinished status separately.
Replacement scenario	Hypothetical cost to recreate defined modules. Engineering hours remain assumptions; vendor rate cards are comparators. It is neither a valuation nor an amount already owed.
Forward creator services	The model carries 520 product hours × $150 = $78,000 and 260 creative hours × $125 = $32,500. These are allowances, not a verified market average or signed fee agreement.
Completion and operation	$441,000 platform completion allowance: 2,520 assumed hours × $175. Scope, current code, acceptance, warranties and post-launch support require written estimates.
Historical compensation	Past hours, invoices and ownership / licensing terms need documentation. Historical creator backpay is excluded from the present cash total.

CRM, ATS and store belong in both product and financial sections

Compare licensed alternatives by seats, included features, implementation, annual commitments and support. Compare a custom build by scoped engineering, security, testing and maintenance. Subscription costs are alternatives to custom capability, not automatic extra expenses. A self-hosted license price does not include deployment or ongoing administration.

Who owns and maintains the assets?

Document the borrower, creator agreement, IP rights, third-party licenses, vendor responsibilities and long-term maintenance. Any limited revenue-linked return on a higher tier would need a fixed cap, end date and counsel review; it must never become permanent ownership or an unlimited share of receipts.

07 / INVESTOR READINESS

What needs to land before a yes.

The revised package is more credible when it distinguishes evidence from ambition. These remaining decisions change the financing answer.

Owner / area	Evidence to attach
Center operator	Current license / capacity, age mix, opening hours, enrollment and collections; lease; staff roster / shift coverage; payroll, benefits and insurance quotes. The 40-child, four-room case is an assumption.
Delivery lead	Source-verified remaining scope, vendor estimates, milestone dates, acceptance tests, support plan and contingencies for staff / vendor failure.
Education / health / privacy leads	Named reviewer approvals, bilingual review, child-consent and retention process, security testing and restore evidence. Confirm accreditation requirements rather than implying approval.
Finance lead	Separate segment economics; row-level phase budget; 13-week cash, 12-month forecast and five-year statements; source / use table and reserve reconciliation.
Sales / operations lead	Paid pilot evidence, signed terms, subscription delivery costs, product margins, customer acquisition and renewal evidence.
Borrower / counsel	Borrower identity, IP / creator agreement, debt terms, guarantees / collateral if any, reporting, default / cure and prepayment provisions.

The funding calculation

Calculate the peak cumulative cash shortfall using the actual timing of spending and receipts, then include the agreed cash buffer, financing costs and verified capital already available. The cost model already carries reserves; reconcile them with the buffer instead of adding both twice. Net financing needed may be less than gross cash cost, but that reduction must be supported.

How this changes the package

The new investor one-sheet leads with the current cost range and financing gap. The digital plan links this update and marks old finance sections as historical. The business-plan PDF begins with this reconciliation and retains its 44 original pages as a visibly marked reference. The production bible and operations companion retain their detail; they do not establish current financial coverage. A full narrative and cash-flow rewrite remains necessary once actual inputs and quotes replace assumptions.

08 / SOURCES 1
